

Introducing smilefixed

What is Smilefixed?

Smilefixed is a self-ligating bracket system that offers patients a discreet way to straighten their teeth. Manufactured using the latest laser technology, Smilefixed ensures a subtle appearance, with the smooth surface and low profile of the bracket creating a comfortable patient experience. Smilefixed kits are available in either metal or clear brackets, ensuring there is an option for every patient's preference.

The unique sliding mechanics provide safe and fast treatment, with little force required to move the teeth. In addition, the composition of the material is inherently stronger and less susceptible to staining and abrasion than many other brackets. The brackets also feature a fishgrate base which gives a strong mechanical bond and also allows for easy debonding.

Key benefits

UK based - S4S Dental have extensive experience in orthodontic appliance and indirect bonding provision.

Premium material - does not stain like Polyurethane or Polycarbonate. Also does not abrade like ceramic.

Quicker treatment - patients complete treatment up to 6 months faster than with traditional braces.

Dual use - additional ligatures and attachments can be used.

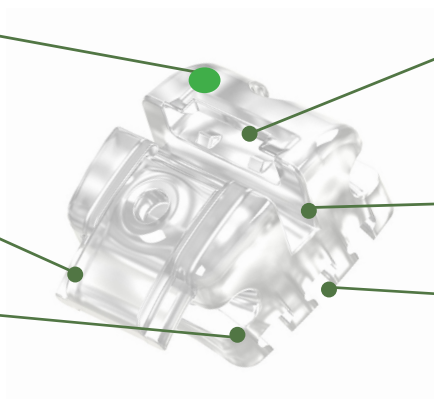

Complete kit - everything you need for treatment at a set price per arch.

Design features

Marking for fast identification and aligning.

Easily movable sliding door that can be opened and closed with fingers or the Smilefixed tool.

Dual use. Additional ligatures and attachments can be used at any time.

Click sound to signify closed position.

0.18 x 0.22 slot.
- torqued slots
- ultra-low friction
- active wire height 0.025.

Gives a strong mechanical bond from fishgrate base for perfect bonding and easy debonding.

Who should use the system and how much does it cost?

Smilefixed is ideal for orthodontists and general dentists who already have experience and knowledge in fixed appliance therapy and are wanting an aesthetic, self-ligating bracket option at a competitive price. The cost of Smilefixed begins at £330 per arch and is available as a single or dual arch kit.

What is included in the kit?

The Smilefixed kit features everything you need to offer treatment in your practice, including:

- Sequential archwire
- Self-ligating tool
- Glass ionomer cement
- Bondable buccal tubes for 6s or 7s
- Bracket cleaner
- Instructions for use and patient care leaflet

What support is available?

A UK-based laboratory, we have a team of skilled dental technicians available on the phone, whenever you should need them. Responsible for producing your indirect bonding trays, our orthodontic technicians are thoroughly trained and can answer any queries you may have.

We also have a dedicated Client Support team that are on-hand to answer any queries you may have. To view more information on Smilefixed, including full costs and available kits, please visit s4sdental.com/smilefixed.
