

Autumn Fern

Care Guide

Light

Thrives in full shade to partial shade. Direct sunlight can scorch leaves.

Water & Humidity

Prefers moist well drained soil, so make sure not to let the soil get too dry or super soggy. They do prefer higher humidity and can benefit from misting if you live in a drier area.

Temperature

Ideal temperature is 60-85°F

Food

Autumn fern benefits from a light application of slow-release fertilizer just after growth appears in spring. Keep in mind that autumn fern is a naturally slow-growing plant.

Toxicity

Some parts are toxic to humans and animals if ingested.

Growers Tips

The leaves can curl back and become crispy when a fern is in dry air. Daily misting can help to prevent this.
