

Coontie Palm

Care Guide

Light

Thrives in full sun to partial shade.

Water & Humidity

Coontie palms are extremely drought tolerant, but it is important to keep a normal water schedule for the first growing season to develop a healthy root system. They prefer around 40-50% humidity .

Temperature

Ideal temperature is 60-80°F

Food

Enrich the soil with a small amount of organic material, such as compost, and select a fertilizer with ammoniacal nitrogen rather than nitrate nitrogen to enhance growth.

Toxicity

Toxic to humans and pets if ingested..

Growers Tips

Coontie palms don't require pruning, but you can prune to control growth and maintain shape. A common sign that plants are experiencing nutrient deficiencies is the yellowing of leaves. This may be an overall yellowing or leaves that are yellow but still have green veins. These leaves will eventually brown off and die.
