

Ctenanthe Exotica Care Guide

Light

Thrives in bright indirect light. Be sure not to place in direct sunlight or the leaves can burn.

Water & Humidity

Keep soil consistently moist, but not soggy. You will know to water your plant when its leaves start to curl in. Ctenanthes love higher humidity. Mist them with lukewarm water regularly, use a pebble tray, or place a humidifier nearby.

Temperature

Ideal temperature is 60-85°F

Food

You can use a general houseplant fertilizer once a month during the spring and summer. No fertilizer is necessary during the winter when plant growth naturally slows.

Toxicity

Non-toxic to humans and pets.

Growers Tips

During the winter, your Ctenanthe plant will go through a dormant phase. It will need less water to grow and survive. To water your plant, always use distilled, rain, or filtered water as this plant cannot tolerate the chemicals in tap water.
