

# Dwarf Cavendish Banana Care Guide

## Light

Needs 8-10 hours of full sunlight per day to produce fruit. Can tolerate more shade if no fruit is desired.

## Water & Humidity

Ensure soil is always moist, but not too soggy. Enjoys extra humidity, so it can benefit from a daily misting.

## Temperature

Ideal temperature is 67-80°F

## Food

Maintain the soil quality by fertilizing every two months with a 6-2-12 fertilizer. This type of fertilizer contains 6% nitrogen, 2% phosphorus, and 12% potassium. The higher concentration of nitrogen and potassium allows for a greener plant and a quality fruit yield.

## Toxicity

Non-toxic to humans and pets.

## Growers Tips

If you live in a colder area, you will need to bring your plant indoors during the frosty months. If kept indoors year round make sure to clean the leaves and remove any dead foliage from the soil to prevent pests.
