

Hoya Care Guide

Light

Needs bright, indirect light and will thrive if you provide them with a couple of hours of direct morning or evening.

Water & Humidity

Prefers the soil to dry out a bit between waterings. Achieves best growth in high humidity conditions. Mist daily or place a humidifier nearby.

Temperature

Ideal temperature is 65-80°F

Food

From Spring to Fall you can use a high nitrogen fertilizer monthly on moist soil. This will promote foliage growth.

Toxicity

Non-toxic to humans and pets.

Growers Tips

Never cut the long tendrils! Leaves and flower clusters develop from these. Hoyas don't mind being a bit root bound, you can keep them in the same pot for years.
