

Kimberly Queen Fern Care Guide

Light

Thrives in bright indirect light, but can survive in direct sun if the soil remains moist.

Water & Humidity

Water when the top quarter of the soil is dry. Make sure to remove any extra water from the draining saucer. Prefers higher humidity and can benefit from a daily misting or a humidifier placed nearby.

Temperature

Ideal temperature is 65-80°F

Food

You can use a general houseplant fertilizer diluted to half strength once every three months. Never feed a fern when the soil is dry, it will burn the fronds.

Toxicity

Non-toxic to humans and animals.

Growers Tips

Remove dead fronds to encourage new healthy growth.
