

Majesty Palm

Care Guide

Light

Can tolerate low and medium light conditions, but thrives in bright indirect light. Direct sunlight may burn the leaves.

Water & Humidity

Water only when the top half of the soil has dried. Make sure to remove any water that has accumulated in the saucer. Can tolerate average household humidity, but will benefit from a weekly misting.

Temperature

Ideal temperature is 65-80°F

Food

Feed once a month during the spring and summer with a liquid fertilizer for indoor plants.

Toxicity

Non-toxic to humans and pets.

Growers Tips

Quickly remove any fronds that turn brown or yellow. Doing so improves the look of your plant and allows a clean space and more energy for new leaf growth. The brown fronds do not necessarily indicate a problem if it is being watered properly. Like other palm trees, the fronds on your Majesty Palm will eventually turn brown and die.
