

Money Tree Care Guide

Light

Prefers medium to bright, indirect light. It's a good idea to turn your plant every time you water it for even growth and leaf development. This plant will also adapt to low and fluorescent lights.

Water & Humidity

Your Money Tree prefers deep but infrequent watering. Water your Money Tree when the top 50%-75% of the soil is dry. Water until liquid flows through the drainage holes at the bottom of the pot. Discard any water that has accumulated in the saucer. Prefers higher humidity. You can mist or place a humidifier nearby.

Temperature

Ideal temperature is 65-80°F

Food

Feed once a month in the spring and summer when it is producing new leaves with a water-soluble, well-balanced plant food at half the recommended strength, such as an all purpose fertilizer (20-20-20). No fertilizer is necessary during the winter when plant growth naturally slows. Always make sure the soil is damp before applying any fertilizer.

Toxicity

Non-toxic and completely pet safe.

Growers Tips

Money trees do not like to be moved. If you have to move your plant you may see drooping leaves, but it will adjust once it gets acclimated.
