

Philodendron Brasil Care Guide

Needs bright indirect light or filtered sunlight. Can also tolerate low light conditions, but more light helps the variegation show. Be careful of direct sunlight, as it may scorch the leaves.

Water & Humidity

Water about once a week and allow the topsoil to dry out between waterings. Make sure to remove any accumulated water from your saucer to prevent root rot. Loves high humidity and would benefit from a humidifier nearby or misting the leaves every few days.

Temperature

Ideal temperature is 70-80°F, but can tolerate down to 55°F.

Food

You can feed your Philodendron Brasil a balanced, houseplant liquid fertilizer once a month during the spring and summer which is its active growing season. It will not need additional fertilizer during the winter months.

Toxicity

Toxic to humans and pets if ingested.

Growers Tips

Can benefit from regular dusting, as the leaves easily accumulate dust. Cleaning the leaves regularly helps your plant absorb light.

The Philodendron Brasil is naturally a climber and will therefore thrive to its full potential if given something to climb. The easiest way to do this is to use a moss pole or trellis.
