

Pothos

Care Guide

Light

Pothos thrives in bright but indirect light, however this plant will also comfortably adapt to low and medium light spaces.

Water & Humidity

Water your Pothos every 1-2 weeks, allowing soil to dry out between waterings. Expect to water more often in brighter light and less often in lower light. Pothos prefer higher humidity, place a humidifier near by or mist often.

Temperature

Ideal temperature is 70-90°F

Food

As a fairly fast-growing plant, pothos plants need regular fertilization, especially in the spring and summer, which is their typical growing season. You can buy fertilizer in two forms: pellets/slow-release fertilizer and liquid fertilizer.

Toxicity

Toxic to humans and pets if ingested.

Growers Tips

Can benefit from regular dusting, as the leaves easily accumulate dust. Pothos love to climb, you can encourage your plant with garden ties or hooks to guide it where you would like.
