

# Sansevieria

## Care Guide

### Light

Sansevierias are extremely adaptable, they can survive in low light conditions as well as direct sunlight, but will flourish in medium to bright indirect light.

### Water & Humidity

Water only when the soil is completely dry. Make sure to remove any accumulated water from your saucer to prevent root rot. Prefers dry air, no need to mist.

### Temperature

Ideal temperature is 55-85°F

### Food

Feed once every six months with a liquid fertilizer for indoor plants.

### Toxicity

Mildly toxic to humans and pets.

### Growers Tips

Sanservierias are extremely easy care plants because they are hardy and adaptable to different conditions. Perfect for beginners and forgetful plant parents.
