

Stromanthe Triostar Care Guide

Light

The Stromanthe prefers medium to bright indirect light. The brighter indirect light the plant receives, the more variegation you will see on the leaves. Be careful of exposing it to direct sunlight, as it can burn the leaves.

Water & Humidity

Water when the top quarter of the soil is dry. Make sure to remove any accumulated water from your saucer to prevent root rot. Loves humidity, so feel free to mist daily. You can also use a humidifier or pebble tray to increase humidity.

Temperature

Ideal temperature is 65-80°F

Food

Feed once every month during the spring and summer with a liquid fertilizer for indoor plants.

Toxicity

Non-toxic to humans and pets.

Growers Tips

Brown and crispy leaves are usually a sign that the air is too dry. Your Stromanthe will reach for the light, so it will benefit from a weekly turning.
