

Texas Sage

Care Guide

Light

Texas sage thrives in full sun to partial shade.

Water & Humidity

They can survive on little to no supplemental watering except during periods of extreme drought, and can die if over watered. Will bloom after rain or times of brief humidity.

Temperature

Thrives in warmer climates, but are also cold hardy and withstand temperatures down to 10° F.

Food

This plant doesn't like a lot of fertilizer. At the most, fertilize only 1 or 2 times a year, applying a good granular fertilizer in spring and/or fall.

Toxicity

Non-toxic and pet safe.

Growers Tips

The Texas sage is a fairly slow-growing plant, and may take up to 2 years to become fully established and bloom reliably. Once established, the Texas Sage is extremely drought tolerant. The plant will need to be cut back after its season to allow new spring growth.
