

# ZZ Plant Care Guide

## Light

The ZZ Plant prefers medium to bright indirect light, but it is extremely adaptable. It will tolerate low light and fluorescent lighting in a windowless space.

## Water & Humidity

Water only when the soil is completely dry. Make sure to remove any accumulated water from your saucer to prevent root rot. Does not require any additional humidity.

## Temperature

Ideal temperature is 60-75°F

## Food

Feed once every month during the spring and summer with a liquid fertilizer for indoor plants.

## Toxicity

Mildly toxic to humans and pets.

## Growers Tips

The ZZ Plant will drop its leaflets to conserve moisture during periods of severe drought. If you forget to water yours and see the leaves fall off, don't stress. Water your plant immediately and it should come back. Yellow leaves can indicate overwatering.
