SUSTAINABILITY

Designing new polymers made entirely from recycled materials and imagining a better future. The main intention is to design these newly developed polymers ourselves – and then to manufacture them – instead of using products already developed by others. This has enabled us to join the ranks of those conducting real research in the green sector, to make its contribution to improving this field of study that is so important for the future.

COMPONENTS DERIVED FROM INDUSTRIAL OR CONSUMER WASTE

RECYCLED POLYPROPYLENE (PP)
Minimum 60% recycled materials

RECYCLED POLYAMIDE (PA)
Minimum 30% recycled materials
