

KRX CLEAR PEEL

ACNE PEEL

PROPERTY OF KIN AESTHETICS

ABOUT

Salicylic is a comedolytic (inhibits the formation of comedones), desmolytic (dissolves the bonds of dead skin cells) and anti-inflammatory agent.

Unlike AHA's which are water soluble, salicylic acid is oil soluble. This allows it to penetrate into the pores to help exfoliate, and clear excess sebum and debris from the pore, and this is why salicylic acid is particularly helpful when treating acne.

Salicylic acid is also anti-inflammatory and can help accelerate the healing of current acne lesions.

This formula has a pH of 2.9, making it a gentle peel appropriate for sensitive skin.

BENEFITS

of the Clear Peel

Clears the pore of excess sebum and debris which may lead to future breakouts

Anti-inflammatory effect calms the skin, which is especially important for inflamed acne

BASIC PROTOCOL

01

PREP THE SKIN

Cleanse with Pre-Peel Cleanser, followed by Pre-Peel Toner

02

APPLY PEEL

Once skin is dry, apply up to 4 layers using gauze. You do not need to wait between each layer. Do not leave on for longer than 10 minutes.

03

REMOVE

Remove peel with Post Peel Toner

Optional: Cryofacial Caps or Cica Sheet Masks may be applied after

INFLAMMATORY PROTOCOL

01

PREP THE SKIN
