How to shape your CG Hunter 7' Willow Eucalyptus Tree for a lifelike and stunning display

Shaping your Willow Eucalyptus Tree is a simple yet important step to achieve a realistic and lifelike look.

Step 1: Unpack and Inspect your faux tree

Carefully remove the Willow Eucalyptus Tree from its packaging, ensuring it does not damage the branches during the process.

Step 2: Assemble

As you assemble your tree, carefully match the numbers on the branches correlating to the numbers on the trunk, making sure the arrows point to each other. This will ensure the branches are facing in the right direction.

Step 3: Shape the Stems

While gently supporting each stem where it meets the branch, carefully bend and separate the stems away from the branch and then shape the stem to achieve a natural look. Continue this process for all stems to create a full looking tree.

Ensure that the leaves are not uniformly positioned. Slightly adjust the angle of some stems to add authenticity and create a more natural and dynamic appearance.

Step 4: Fullness and Balance

Check the overall fullness and balance of your faux tree. Rearrange the branches and leaves as needed to achieve a well-balanced and visually appealing silhouette.

Cleaning: Use a soft cloth or microfiber cloth to gently wipe away any dust or particles, keeping the faux tree looking pristine.
