

To use this Fitment Guide please print at actual size or 100% scale and cut out to the inside of the outline.

Take the measurement with the vehicle as it sits. You do not need to raise it. If between to sizes select the one that fits between the coils not the one that is too big to fit.

With the cut out as flat as possible slide each size into the gap between the coils until you find a size that fills the space without being too large.

Scan this QR Code to go to the Coil SumoSprings page where you can order your size Coil SumoSprings
