## Premium Conditioners

### African GH conditioner

Phosphate free. This product has been developed to help you emulate the water parameters from the great lakes of Africa, containing many essential minerals, elements & trace elements required to help osmosis control in African Cichlids. It also contains minerals that assist with fish fertility & egg production.

**1 measured teaspoon or 5gm to 10 litres of water will raise GH (general hardness) by approx 12dGH or 215ppm and stabilise pH to around 8.3pH. For Tanganyika cichlids we recommend using a heaped teaspoon or 8g to 10lt to achieve general hardness of approx 19dGH or 340ppm.**

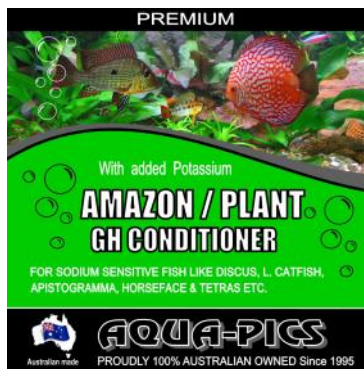

AC150G	150g	African GH Conditioning Salts	50 pr Box
AC250G	250g	African GH Conditioning Salts	48 pr Crt.
AC500G	500g	African GH Conditioning Salts	24 pr Crt.
AC900G	900g	African GH Conditioning Salts	12 pr Crt.

AC04.5K	4.5kg	African GH Conditioning Salts	
AC010K	10kg	African GH Conditioning Salts	
AC020K	20kg	African GH Conditioning Salts	

### Amazon & Plants GH conditioner

Low sodium & phosphate free for sodium sensitive fish such as Discus, Catfish, Apistogrammas & Tetras. Amazon conditioner helps emulate the waters from the Amazon basin, by gently raising the mineral balance. This product contains the essential minerals, elements & trace elements required for sodium sensitive fish such as Discus, Catfish, Tetras, Apistogrammas & Angel fish & raises the essential minerals to help osmosis control in your fish. When used as directed it will raise GH (General Hardness) by approximately 7dGH (125ppm)

**Add 1 heaped teaspoon (8 grams) to 20 Litres of water.**

AM150G	150g	Amazon GH Conditioning Salts	50 pr Box
AM250G	250g	Amazon GH Conditioning Salts	48 pr Crt.
AM500G	500g	Amazon GH Conditioning Salts	24 pr Crt.
AM001K	1kg	Amazon GH Conditioning Salts	12 pr Crt.

AM010K	10kg	Amazon GH Conditioning Salts	
AM020K	20kg	Amazon GH Conditioning Salts	

### American Cichlid GH conditioner

With added potassium, this product increases the GH or general hardness of water to stabilise the mineral balance, and is best used in conjunction with Aqua Pics American Cichlid KH buffer to control pH. When used as directed it will raise GH (General Hardness) by approximately 11dGH (200ppm)

**Add 1 teaspoon by measure (5 grams) to 10 Litres of water.**

AMC250G	250g	American GH Conditioning Salts	48 pr Crt.
AMC500G	500g	American GH Conditioning Salts	24 pr Crt.

## Fighter GH conditioner

Phosphate free. This product contains the essential minerals, elements & trace elements required for healthy Fighters and Bettas, it raises GH (General Hardness) to help osmosis control in fish. When used as directed it raises mineral levels by approximately 7dGH (125ppm) **Add 1 Pinch to 1 Litre of Water. This will raise General Hardness appropriately for fighters**

FC050G	50g	Fighter GH Conditioning Salts	100 pr Box
FC150G	150g	Fighter GH Conditioning Salts	50 pr Box
FC250G	250g	Fighter GH Conditioning Salts	48 pr Crt.

## Fighter Conditioning Pack

This pack has everything you need to get perfect water conditions for fighter and other bettas in one neat package. Contains: 1 x 50ml Fighter Chlorine Neutralizer, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approx. 7.0).

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

## Goldfish GH conditioner

Phosphate free. This product contains the essential minerals, elements & trace elements required for healthy goldfish. It raises GH (General Hardness) to help osmosis control in fish. When used as directed it raises mineral levels by approximately 12GH (215ppm) **Add 1 heaped teaspoon (8grams) to 10lt of water.**

GC050G	50g	Goldfish GH Conditioning Salts	100 pr Box
GC150G	150g	Goldfish GH Conditioning Salts	50 pr Box
GC250G	250g	Goldfish GH Conditioning Salts	48 pr Crt.

GC04.5K	4.5kg	Goldfish GH Conditioning Salts	
GC010K	10kg	Goldfish GH Conditioning Salts	
GC020K	20kg	Goldfish GH Conditioning Salts	

## Hermit Crab Bathing Salts

Added to the crab's bathing dish, this product is used as a salty bath for your hermit crabs. Enriched with sodium, calcium, magnesium, potassium, carbon, iron and nickel, with necessary elements and micronutrients that are necessary for the good health and longer life of your hermit crab.

**Add 1.5 teaspoons to 250ml of fresh water. Dissolve thoroughly before adding to the crab's enclosure.**

HCS110G	110g	Hermit Crab Salts	50 pr Box
HCS250G	250g	Hermit Crab Salts	48 pr Crt.
HCS400G	400g	Hermit Crab Salts	24 pr Crt.

## Pond GH conditioner

Phosphate free. This product contains the essential minerals, elements & trace elements required for healthy goldfish, Koi and other pond fish. It raises GH (General Hardness) to help osmosis control in fish. When used as directed it raises mineral levels by approximately 14GH (250ppm) and brings pH to around 7.4

**Add 1 heaped teaspoon (8 grams) to 10 Litres of water, or 80gm to 100lt of Water.**

PC250G	250g	Pond GH Conditioning Salts	48 pr Crt.
PC400G	400g	Pond GH Conditioning Salts	24 pr Crt.
PC900G	900g	Pond GH Conditioning Salts	12 pr Crt.
PC02.2K	2.2kg	Pond GH Conditioning Salts	
PC04.5K	4.5kg	Pond GH Conditioning Salts	
PC010K	10kg	Pond GH Conditioning Salts	
PC020K	20kg	Pond GH Conditioning Salts	

## Tropical GH conditioner

Phosphate free. This product contains the essential minerals, elements & trace elements required for healthy tropical community fish. It raises GH (General Hardness) to help osmosis control in fish. When used as directed, it raises mineral levels by approximately 8GH (140ppm)

**Add 1 teaspoon or (5 grams) to 8 Litres of Water**

TR050G	50g	Tropical GH Conditioning Salts	100 pr Box
TR150G	150g	Tropical GH Conditioning Salts	50 pr Box
TR250G	250g	Tropical GH Conditioning Salts	48 pr Crt.

TR02.5K	2.5kg	Tropical GH Conditioning Salts	12 pr Crt.
TR04.5K	4.5kg	Tropical GH Conditioning Salts	
TR010K	10kg	Tropical GH Conditioning Salts	
TR020K	20kg	Tropical GH Conditioning Salts	

## Turtle GH conditioner

Phosphate free. With extra calcium for strong shells. This product contains the essential minerals, elements & trace elements required for healthy turtle and fish. It raises GH (General Hardness) to help osmosis control in aquatic animals. When used as directed it raises mineral levels by approximately 10GH (180ppm)

**Add 1 teaspoon or 5 grams to 10 Litres of Water**

TC150G	150g	Turtle GH Conditioning Salts	50 pr Box
TC250G	250g	Turtle GH Conditioning Salts	48 pr Crt.
TC500G	500g	Turtle GH Conditioning Salts	24 pr Crt.

TC04.5K	4.5kg	Turtle GH Conditioning Salts	
TC010K	10kg	Turtle GH Conditioning Salts	
TC020K	20kg	Turtle GH Conditioning Salts	

# AQUA-PICS

## Premium KH Buffers

### African KH Buffer plus Potassium

Phosphate free. African KH Buffer helps emulate the waters from the Great Lakes of Africa, raising carbonate hardness by around 9dKH and locking up the pH at around 7.8 to 8.5, stopping pH fluctuation to create pH stability and reducing stress on fish. It also contains minerals that assist with fish fertility and egg production.

**Add 1 teaspoon to 20 litres of water to raise carbonate hardness by approximately 12KH or 214ppm, and stabilise pH to about 8.5**

AK150G	150g	African KH Buffer	50 pr Box
AK300G	300g	African KH Buffer	48 pr Crt.
AK600G	600g	African KH Buffer	24 pr Crt.
AK001K	1kg	African KH Buffer	12 pr Crt.
AK02.5K	2.5kg	African KH Buffer	6 pr Crt.
AK04.5K	4.5kg	African KH Buffer	
AK010K	10kg	African KH Buffer	
AK020K	20kg	African KH Buffer	

### Tanganyika KH Buffer

Phosphate free. Tanganyika KH Buffer helps emulate the water from Lake Tanganyika in Africa by raising carbonate hardness, locking up pH at 8.5 to 9.5 and stopping pH fluctuation to create pH stability, and reducing stress on your fish. It also contains minerals to assist with fish fertility and egg production. 1 kg treats 2500 litres of R.O. water.

**Add heaped 1 teaspoon (8g) to 20 litres of water to raise carbonate hardness by approximately 16dKH (285ppm).**

TANG150G	150g	Tanganyika KH Buffer	50 pr Box
TANG250G	250g	Tanganyika KH Buffer	48 pr Crt.
TANG500G	500g	Tanganyika KH Buffer	24 pr Crt.
TANG001K	1kg	Tanganyika KH Buffer	12 pr Crt.
TANG02.5K	2.5kg	Tanganyika KH Buffer	6 pr Crt.
TANG04.5K	4.5kg	Tanganyika KH Buffer	
TANG010K	10kg	Tanganyika KH Buffer	
TANG020K	20kg	Tanganyika KH Buffer	

### Amazon KH Buffer (for discus, L Number cat fish & apistogrammas)

Amazon KH Buffer helps emulate the water from the Amazon Basin by raising carbonate hardness without compromising the slightly acidic pH required for fish that come from this region, such as discus, tetras, apistogrammas and angel fish. It raises carbonate hardness and locks in pH to approximately 6.5 to 6.8, stopping pH fluctuation, creating pH stability and reducing stress on fish.

**Add 1 teaspoon by measure to 8 litres of water to raise carbonate hardness by approximately 6dKH (105ppm).**

DK040G	40g	Discus / L.Catfish KH Buffer	100 pr Box
DK120G	120g	Discus / L.Catfish KH Buffer	50 pr Box

DK016K	16kg	Discus / L.Catfish KH Buffer	20lt Pail
DK020KB	20kg	Discus / L.Catfish KH Buffer	Bag

## Native KH Buffer 7.5

As many native fish from Australia and Papua New Guinea come from alkaline fresh water or brackish water conditions, this Native KH Buffer raises carbonate hardness, locking up the pH at around 7.5pH and stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 heaped teaspoon to 10 litres of water to raise carbonate hardness by approximately 8dKH (143ppm).**

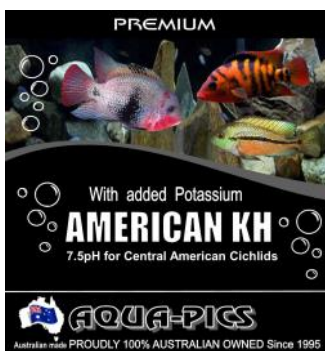

NA150G	150g	Native KH Buffer	50 pr Box
NA250G	250g	Native KH Buffer	48 pr Crt.
NA500G	500g	Native KH Buffer	24 pr Crt.
NA001K	1kg	Native KH Buffer	12 pr Crt.
NA02.2K	2.2kg	Native KH Buffer	6 pr Crt.
NA04.5K	4.5kg	Native KH Buffer	
NA010K	10kg	Native KH Buffer	
NA020K	20kg	Native KH Buffer	

## Central & North American Cichlids KH Buffer 7.5

As many Central American cichlids come from alkaline water conditions, this KH Buffer raises carbonate hardness, locking up the pH at around 7.5pH, stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 heaped teaspoon to 10 litres of water to raise carbonate hardness by approximately 8dKH (143ppm).**

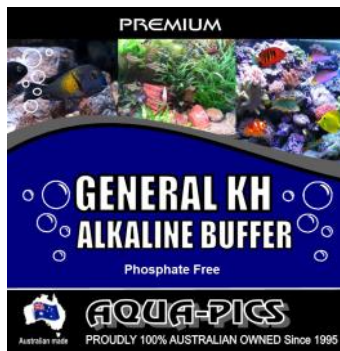

AMK150G	150g	American Cichlid KH Buffer	50 pr Box
AMK250G	250g	American Cichlid KH Buffer	48 pr Crt.
AMK500G	500g	American Cichlid KH Buffer	24 pr Crt.

AMK04.5K	4.5kg	American Cichlid KH Buffer	
AMK010K	10kg	American Cichlid KH Buffer	
AMK020K	20kg	American Cichlid KH Buffer	

## General KH Alkaline Buffer

Phosphate free. General KH Alkaline Buffer raises carbonate hardness by approximately 1dKH (18ppm) at a time for those sensitive situations like planted tanks running Co<sup>2</sup> etc. As it has a high pH, this counteracts the acidity from the Co<sup>2</sup>, stopping pH fluctuation to create pH stability and reducing stress on fish. Suitable for both fresh and salt water aquariums.

**Add 1 teaspoon (5g) to 60 litres of water to raise carbonate hardness by approximately 1dKH (18ppm).**

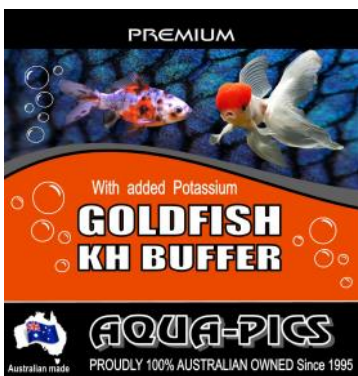

KG150G	150g	General KH Alkaline Buffer	50 pr Box
KG250G	250g	General KH Alkaline Buffer	48 pr Crt.
KG500G	500g	General KH Alkaline Buffer	24 pr Crt.
KG001K	1kg	General KH Alkaline Buffer	12 pr Crt.

KG04.5K	4.5kg	General KH Alkaline Buffer	
KG010K	10kg	General KH Alkaline Buffer	
KG020K	20kg	General KH Alkaline Buffer	

## Goldfish KH Buffer 7.4

As goldfish don't like acid pH, Goldfish KH Buffer raises carbonate hardness, locking up pH at around 7.4pH, stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 rounded teaspoon to 10 litres of water to raise carbonate hardness by approximately 8dKH (143ppm).**

GK150G	150g	Goldfish KH Buffer 7.4	50 pr Box
GK250G	250g	Goldfish KH Buffer 7.4	48 pr Crt.

GK010K	10kg	Goldfish KH Buffer 7.4	
GK020K	20kg	Goldfish KH Buffer 7.4	

## Neutral KH Buffer 7.0

Contains phosphates. For when pH stability is a problem and pH Up or pH Down are not doing the job (they are simply Band Aids on the problem), the solution lies in raising the KH (carbonate hardness) of your water. Neutral KH Buffer 7.0 raises carbonate hardness, locking the pH at around 7.0, stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 teaspoon (4g) to 10 litres of water to raise carbonate hardness by approximately 7dKH (125ppm).**

NK040G	40g	Neutral KH Buffer 7.0 (50ml)	50 pr Box
NK120G	120g	Neutral KH Buffer 7.0 (100ml)	50 pr Box
NK250G	250g	Neutral KH Buffer 7.0 (300ml)	48 pr Crt.

NK016K	16kg	Neutral KH Buffer 7.0 (20lt)	Pail
NK020KB	20kg	Neutral KH Buffer 7.0 (Bag)	Bag

## Fighter KH Buffer

Contains phosphates. As many Bettas are kept in small volumes of water, their pH is often compromised and drops much too low for optimum conditions. Our Fighter KH Buffer raises carbonate hardness, locking pH at around 7.0, stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 heaped teaspoon to 10 litres of water to raise carbonate hardness by approximately 6dKH (105ppm).**

FK040G	40g	Fighter KH Buffer	50 pr Box
FK120G	120g	Fighter KH Buffer	50 pr Box
FK250G	250g	Fighter KH Buffer	48 pr Crt.

## Fighter Conditioning Pack

This pack has everything you need to get perfect water conditions for fighter and other bettas in one neat package. Contains: 1 x 50ml Fighter Chlorine Neutralizer, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approx. 7.0).

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

## Turtle & Axolotl KH Buffer 7.2

Phosphate free. Low pH in the water in your turtle tank can result in soft shells and burning of their skin. Turtle & Axolotl KH Buffer 7.2 raises carbonate hardness, locking the pH at 7.2 to 7.4, stopping pH fluctuation to create pH stability and stopping acid burn, reducing stress on turtles and axolotls.

**Add heaped 1 teaspoon to 18 litres of water to raise carbonate hardness by approximately 4dKH (72ppm).**

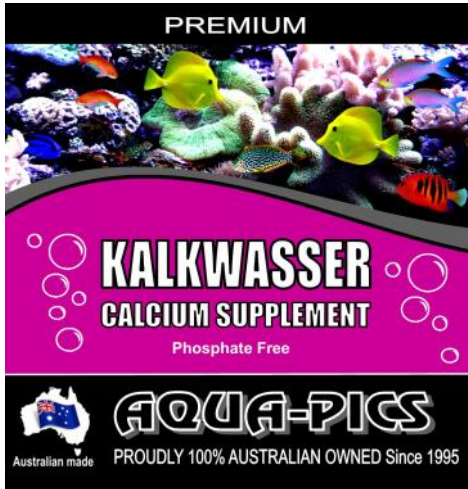

TK120G	120g	Turtle KH Buffer 7.2	50 pr Box

## Kalkwasser

Kalkwasser is a calcium hydroxide supplement to help corals grow and build coral bone structure. Unlike many other brands, this product is finely ground to maximise solubility.

**Keep adding Kalkwasser powder to 2 litres of water until no more can be dissolved. Then over a few hours, add solution to the aquarium very slowly (using a drop system into a moving current).**

KW125G	125g	Kalkwasser 250ml	48 pr Crt.

# AQUA-PICS

## Premium Complete Conditioners

### Complete Conditioner—Goldfish

Aqua-Pics Complete Conditioner packs are a no-fuss, easy-to-use, one-step mineralisation solution for people with small or nano freshwater aquariums that don't want to fuss with measuring out multiple products to get their water ready for fish. With just this one product, you can raise the GH general hardness and the KH carbonate hardness at the same time, stabilising the pH of your aquarium. Aqua-Pics Complete Conditioner packs add the essential minerals required to aid in the good health & longer life of your fish.

Add 1 heaped teaspoon (8 grams) to 5 Litres of water to raise GH by approx. 12dGH or 214ppm, and KH by approx. 8dKH or 140ppm and stabilise pH to around 7.4

GCC100G	100g bag	Goldfish Complete Conditioner
GCC150G	150g tub	Goldfish Complete Conditioner

TCC150G	150g tub	Tropical Complete Conditioner
TCC250G	250g bag	Tropical Complete Conditioner

### Acid pH Buffer (Phosphate Free)

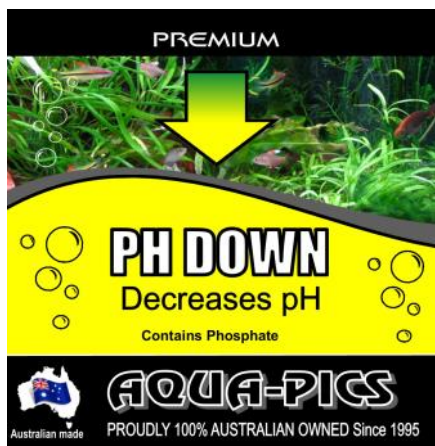

Phosphate free for sensitive fish, shrimp, and plants. Lowers the pH of water & decreases the alkalinity and KH (Carbonate Hardness) without phosphates. For the serious fish, shrimp, and aquatic garden aquarium keeper that works hard to maintain a balanced tank. Converts carbonate hardness into usable co2 for the plants to use as required.

## Aquarium Salts

This product raises salinity for fish that require extra sodium, such as many Australian native species, live bearers, and brackish water fish that require higher sodium levels to survive in captivity. It also helps to prevent infections and aids in the healing process of wounded fish. **Add 1 teaspoon (5 grams) to 8 litres of water**

## Medicating Salts

This product should be added to your aquarium when fish are suffering from disease, bacterial infections, damage from injury, or parasites like whitespot. By raising the salinity, it will help prevent secondary infections and will aid the healing process of your fish. Medicating Salts should be used in conjunction with appropriate medications for the illness you are treating.

**Add 6 teaspoons (30g) to 25 litres of water. (125g salts to 100lt water)**

## Potassium Supplement

For better plant growth and fish fertility. Potassium is essential for plant growth & photosynthesis, so plants can easily grow and propagate. Potassium in higher level aids in promoting fertility in fish, increasing spawning frequency and clutch sizes increasing the productivity and profitability of your fish hatchery.

**For plant growth, add 1 teaspoon (5g) to 130 litres of water.**

**To aid in fish fertility, add 1 teaspoon (5g) to 28 litres of water.**

## Fighter GH conditioner

Phosphate free. This product contains the essential minerals, elements & trace elements required for healthy Fighters and Bettas, it raises GH (General Hardness) to help osmosis control in fish. When used as directed it raises mineral levels by approximately 7dGH (125ppm) **Add 1 Pinch to 1 Litre of Water. This will raise General Hardness appropriately for fighters**

FC050G	50g	Fighter Conditioning Salts	100 pr Box
FC1500G	150g	Fighter Conditioning Salts	50 pr Box
FC250G	250g	Fighter Conditioning Salts	48 pr Crt.

## Fighter KH Buffer

Contains phosphates. As many Bettas are kept in small volumes of water, their pH is often compromised and drops much too low for optimum conditions. Our Fighter KH Buffer raises carbonate hardness, locking pH at around 7.0, stopping pH fluctuation to create pH stability and reducing stress on fish.

**Add 1 heaped teaspoon to 10 litres of water to raise carbonate hardness by approximately 6dKH (105ppm).**

FK040G	40g	Fighter KH Buffer	50 pr Box
FK120G	90g	Fighter KH Buffer	50 pr Box
FK250G	250g	Fighter KH Buffer	48 pr Crt.

## Fighter Conditioning Pack

This pack has everything you need to get perfect water conditions for fighter and other bettas in one neat package. Contains: 1 x 50ml Fighter Chlorine Neutralizer, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approx. 7.0).

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

## Indian Almond Leaves (Premium AAA grade)

Indian Almond leaves are used by professional breeders as an all-natural way to add tannins, humic acids and beneficial microbes to a soft water aquarium. Increases the health and well-being of fish, shrimp and other aquatic life.

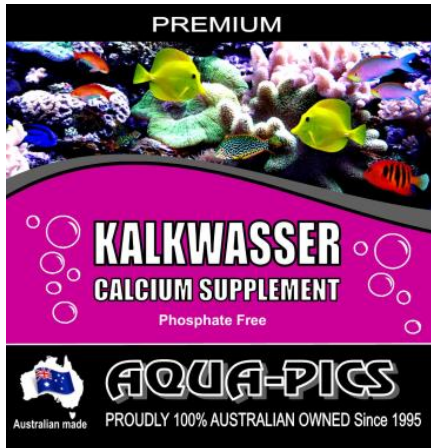

**Simply place a leaf in the aquarium and let nature do it's work! Comes in a convenient, cello-wrapped 10-pack. Each leaf is approx. 25cm long.**

AL010P                      10pk    Indian almond leaves

## Kalkwasser

Kalkwasser is a calcium hydroxide supplement to help corals grow and build coral bone structure. Unlike many other brands, this product is finely ground to maximise solubility.

**Keep adding Kalkwasser powder to 2 litres of water until no more can be dissolved. Then over a few hours, add solution to the aquarium very slowly (using a drop system into a moving current).**

## Basics Neutral KH Buffer

For when pH stability is a problem and pH Up or pH Down are not doing the job (as they are simply Band Aids on the problem), the solution lies in raising the KH (carbonate hardness) of your water. Neutral KH 7.0 Buffer raises carbonate hardness, bring pH up and / or down, as required and locks the pH at around 7.0, stopping pH fluctuation to create pH stability and reducing stress on fish. Contains phosphates.

**Add 1 teaspoon (4g) to 10 litres of water to raise carbonate hardness by approximately 7dKH (125ppm).**

## No More Black Beard

Black Beard algae can be a virulent problem that occurs in many planted aquariums. It is unsightly, and can result in poor plant growth. To solve this problem you need to raise the carbon level of the water, this promotes plant growth and inhibits the growth of the black beard algae. No More Black Beard destroys the cells of the black beard algae preventing it from photosynthesizing, then breaks down into a usable carbon source for the plants, helping them to flourish. When Bearded algae becomes a problem, you should add No More Black Beard to your aquarium or pond for lush green plant growth.

**Begin with a major water change of 30-40%. For 1st dose, add 5ml for each 50 litres of water, then add 1ml per 40 litres water every 2 days for 1-3 weeks. Water should be kept well-aerated. Results should be visible in 1-3 weeks.**

# AQUA-PICS

## For Plants

### Carbo-Max – Professional grade liquid carbon supplement

“Like liquid Co<sup>2</sup>”. Carbo-Max for the professional aquarium. Designed for optimum results and thick lush plant growth. Carbo-Max is a concentrated liquid organic carbon sauce for plants.

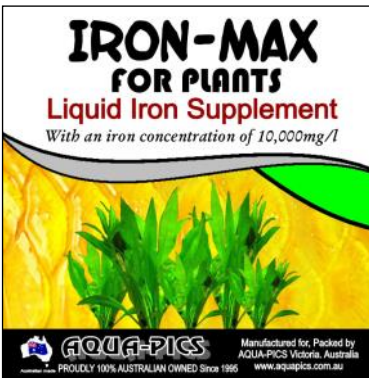

Before initial use, do a 30-40% water change. Add 5ml Carbo-Max to 50 litres of water, then add 1ml per 40 litres water every 1 to 3 days. Preferably use in conjunction with Plant-Max and Iron-Max.

## Plant-Max Pro – Complete aquatic plant food for heavily planted aquariums

Complete aquatic plant food for heavily planted and aquascaped aquariums needing a professional fertiliser. Rain water and most town water supplies are void or almost void of plant nutrients. To get that professional edge with optimum results, for lush greens and brighter reds, you should add Aqua-Pics Plant-Max Pro in conjunction with Aqua-Pics Iron-Max and Carbo-Max.

This product was developed by a professional aquarium plant grower with over 45 years experience supplying the aquatic industry with plants. It contains the perfect levels of essential minerals, compounds, macro and micro nutrients required for a heavily planted aquarium wanting professional results.

Add Aqua-Pics Plant-Max Pro once every two weeks or after each water change. Add 5ml to 50 litres of water. This will raise the plant nutrients by approximately 0.3% total dissolved active nutrients for flourishing thick fresh water plant growth.

BBF250M	250ml	Bacta-Boost liquid	36 pr Crt.

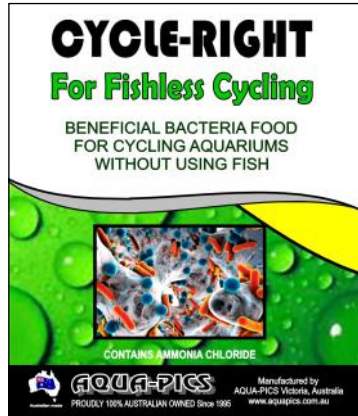

## Cycle-Right Bacteria Food (ammonia supplement for fishless cycling)

There are now 2 ways to begin a cycle in a new aquarium! Traditionally we have used fish to produce waste that converts into ammonia to feed the beneficial bacteria. This can create a lot of damage and stress to these fish. There is a better way!

Using Aqua-Pics Cycle-Right, you can now add chemically-clean ammonia directly to the aquarium. By monitoring the ammonia level regularly, keeping it between 0.25ppm and 5.0ppm, you can cycle your tank safely and efficiently without causing harm to any aquatic creatures in the process. Keep away from children. Do not use while fish are in the tank.

Add 1 drop per litre or 5ml to 100 litres of aquarium water for an ammonia level between 0.25ppm 7 5ppm. Test regularly and add as required to maintain a minimum ammonia level of 0.25ppm. Avoid levels over 5ppm in the aquarium.

Do this for 3 to 6 weeks or until the ammonia & nitrite levels are dropping to 0.0 within a 12 hour period. At this stage you can stop adding Cycle-Right. Wait at least another 24 hours before adding fish.

## Black Water Extract

Humic and tannic acids with B group vitamins. Adds the natural tannins, humic acids and B group vitamins that tropical fish are accustomed to in their natural environment. This is a natural spawning aid and colour enhancer. Your fish will become healthier, more active, and their colours will become more vibrant.

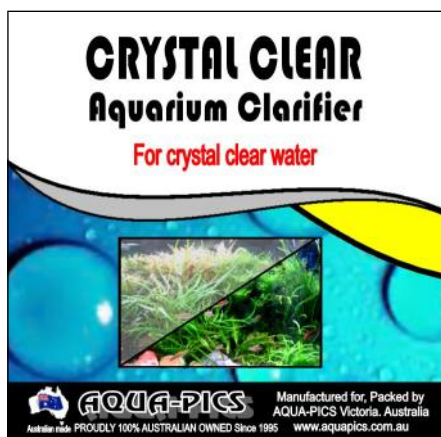

Add 5ml to 25 litres of water. In hard water, use 10ml per 25 litres water.

## Snail Away

For the eradication of unwanted snails in the aquarium. This is a copper based treatment that needs to be used strictly as directed. It should not be used in tanks housing shrimp, other crustaceans, or invertebrates. Some plants can also be sensitive to copper, and may be affected by treatments containing copper. If your fish show signs of stress after treating with Snail Away, do a 30% water change immediately.

Add 5ml to 40lt of water every 7 to 14 days until snails have started dying. Wait 2 weeks, then do a 30% water change. If more treatment is required, wait 2 weeks before commencing.

## Protecta Coat

With fresh organic aloe vera to help promote healing & regenerate damaged tissue while forming a protective synthetic slime coat, Protecta Coat is perfect for use when transporting fish or when fish are injured or diseased & undergoing treatment.

To protect fish with a slime coat and help repair damaged fins, scales & skin, add 5ml to 50lt for best results.

For removal of chlorine, chloramine, ammonia & heavy metals from tap water, add 5ml to 100lt of water.

### Filter Wool Sheet

Our Premium quality filter wool sheet is manufactured specifically for use in aquariums. It captures both coarse and fine particulate matter before it passes through the other stages of your filter system. Made from extra dense (300 gsm), 40mm thick, thermally bonded polyester fibre, this is a firm aquarium filtration media which resists compression and is less likely to slump or collapse under water pressure. Aqua-Pics filter wool is safe for all aquarium life. It is quick and convenient to replace and suitable for any type of filtration which uses filter wool, including canister filters, trickle systems and top filters.

Many filter wools are made from material designed for air conditioning rather than aquariums. They often collapse, need more frequent replacement, and may contain harmful chemicals or toxins. Don't risk your fish! Use Aqua-Pics Premium quality filter wool.

**Directions: Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.**

### Pre Filter Intake Sponge

Our Pre Filter Intake Sponges have the perfect density to hold maximum volume of particulate matter without rapid clogging. Available in 3 different hole sizes to easily slide over almost any filter intake tube, allowing maximum filtration while preventing young fish or shrimp from being sucked into your power filter. Pre Filter Sponge is easy to remove and clean. (Intake tube is not provided with sponge.)

**Rinse well before use. Place over filter intake grill.**

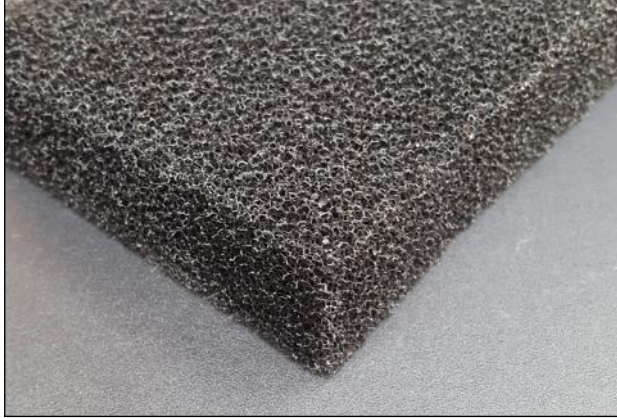

PFS001SH	Small (8mm) hole	Pre Filter Intake Sponge

PFS001LH	Large (25mm) hole	Pre Filter Intake Sponge

## Filter Sponge

Our Filter Sponge has the perfect density to hold maximum volume of particulate matter without rapid clogging. Designed to maximise surface area for a flourishing beneficial bacteria culture to break down the organic matter held within the fibres. Filter Sponge is easy to cut to size and easy to clean. Suitable for any type of filtration.

**Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.**

## Peat Pouches

Aqua-Pics Peat Pouches are a natural way to add tannins, humic acids and microbes that are beneficial to many blackwater species of fish and crustaceans. Suitable for use in aquariums or ponds. Lowers pH naturally in a clean, convenient way. Our pouches contain a proprietary blend of peats that aid in the microbial balance of your aquarium or pond, and barley straw to help prevent algae growth. **One pouch treats 100 litres of water. Rinse before use. Can be added directly to the aquarium or pond, or placed into a filter system. For best results, remove carbon and replace pouch every 4 weeks.**

PP100L	Single pouch for 100 litres hang sell	Peat Pouches
PP200L	Twin pouches for 200 litres hang sell	Peat Pouches

## Premium Activated Carbon

Aqua-Pics Premium Activated Carbon contains up to 3 times more minerals than regular charcoal & has a much greater absorption capacity. With a surface area of over 700m<sup>2</sup>/g. Clearing brown tannin-stained water and absorbing surplus chloride ions from the aquarium, it is a perfect micro organic water treatment system. Purifies the water for a crystal clear aquarium.

**Rinse well before use. Place media into appropriate chamber of your filter.**

PAC300G	300g	Premium Activated Carbon
PAC600G	600g	Premium Activated Carbon
PAC01.2K	1.2kg	Premium Activated Carbon

## Filter Pads - 2 pack

Our fine Heavy Duty Filter Pad is perfect for use in the built-in filters found in many of the “complete” tanks available. Captures particulate matter from the aquarium, effectively polishing the water before it is returned to the aquarium. Unlike traditional filter wool, this product can be cleaned many times before requiring replacement, making it exceptionally good value. Our Heavy Duty Filter Pads are easy to cut to size and easy to clean. Suitable for many types of filtration. Each pack contains 2 pads—30cm x 9cm x 5mm thick. **Cut to shape and size required.**

**Rinse well before use. Place media into appropriate chamber of your filter.**

## Ceramic Bio Noodles

Premium ceramic noodles, for crisp, clean water. Comes in a mesh bag ready for use.

Aqua-Pics Bio Noodles are made from high porosity ceramic and engineered to give you maximum surface area in minimum space for beneficial bacteria to colonise, grow and develop. With a higher surface area than many other ceramic noodles, providing the perfect ecological system for healthy fish and a stable environment with crisp, clear water.

**Rinse well before use. Place media bag into appropriate chamber of your filter.**

Net Bay - large with zip

## Macro-Pure Nitrate & Tannin Remover

Aqua-Pics Premium Macro-Pure is a macro-porous synthetic polymer resin filter media that has a much greater absorption capacity than many other similar products available. Rapidly clears brown tannin-stained water and absorbs nitrates by filtering nitrogenous waste. It is a perfect micro-porous water treatment system that purifies the water for a crystal clear aquarium.

**Rinse well before use in a fine mesh bag available from your local aquarium, then place the bag of Macro-Pure in your filter. 5 litres will treat up to 24,000 litres of water for up to 6 months.**

When Macro-Pure is exhausted it can be recharged in a 6% salt solution (2 handfuls of non-iodised salt to 1 litre of water) for 12 hours, rinse well before use. Once it becomes significantly darker in colour, or after 4 to 5 recharges, it will need to be recharged in a 50% bleach solution for optimum results.

MAC050M	50ml	Macro-Pure 50ml
MAC100M	100ml	Macro-Pure 100ml

## Macro-Socks

Aqua-Pics Premium Macro-Socks are a reusable, ultra fine bag which is ideal for holding synthetic polymer resins such as Macro-Pure or carbon, zeolite, and any other filter media that needs to be contained in a bag.

Available in Small—9cm x 22cm and Medium—16cm x 25cm.

SOC02PS	2pk	Macro-Socks Small 2 pack
SOC02PM	2pk	Macro-Socks Medium 2 pack

### Air Stones

An air stone is a simple aerating device that can be added to any 4mm airline. Creates bubbles and current to oxygenate the water and break the surface tension allowing oxygen exchange for beneficial bacteria, fish and plants.

AST004	4"	Air Stone
AST004B	4" 12pk	Air Stones
AST006	6"	Air Stone
AST006B	6" 12pk	Air Stones
AST2100P	2" grey cylindrical 100pk	Air Stones

### One Way Check Valves

Check Valves should be fitted in the air line approx. 6" (150mm) from the air pump and are designed with a silicone one-way reed-type valve so air can flow to your equipment in the aquarium without too much restriction. In the event of a power failure, water can syphon back down the air line into your pump, causing damage to the pump and electrical shorting. These simple one-way check valves stop the water before it can get to your pump, so preventing any water damage.

CVHS2PK	2pk hang sell	1 Way Check Valves
CV50CLR	50pk	1 Way Check Valves

### Algae Cleaning Sponge (Non-Scratch)

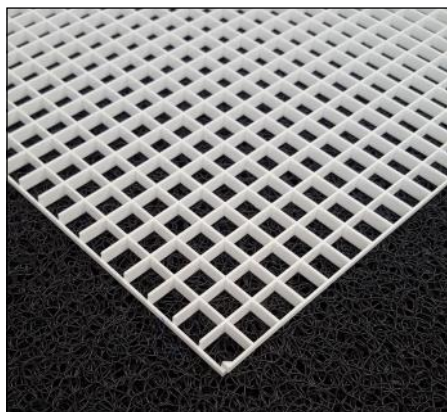

This algae cleaning sponge is covered in a unique non scratch nylon mesh that glides over your glass or acrylic removing the attached algae whilst leaving the glass or acrylic clean and unharmed.

AS01NS	Non-scratch Algae Sponge

## Aqua Mesh

Aqua-Pics Aqua Mesh is a long-life heavy duty flexible mesh that comes in many sizes with either 1mm holes or 5mm holes. It originates from the oyster growing industry and is a good universal semi-rigid mesh that can be used on sump overflows, attaching moss-type plants, for making tank dividers, and for homemade fish saving devices or fry boxes, etc. Colour could be grey, black or brown.

## Co2 Refill Chemical Pack

To create Co2 you must blend equal parts of Acid part A with Alkaline part B. Add the 200g bag of part A & the 200g bag of part B to the Co2 reaction chamber. Make sure the thread on the chamber is dry & kept free from powder. Be sure to tilt the reaction chamber on a 45 degree angle before adding 300ml of water to avoid an over reaction.

CO2R400
