Premium Conditioners

African GH Conditioner

Phosphate free. African GH Conditioner helps your aquarium emulate the water parameters of the Great Lakes of Africa. It contains many essential minerals, elements & trace elements which promote health and help osmosis control in African cichlids. It also contains minerals which assist with fish fertility and egg production.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise GH (general hardness) by approximately 12dGH or 215ppm and stabilise pH to around 8.3. For Tanganyika cichlids we recommend using a rounded teaspoon or 8g to 10 litres to achieve general hardness of approximately 19dGH or 340ppm. For Malawi cichlids or a mixed African tank, we recommend aiming for around 16dGH and a pH over 8.0.

AC150G	150g	African GH Conditioning Salts	48 per box
AC250G	250g		48 per box
AC500G	500g		28 per box

AC002K	2kg		6 per box
AC04.5K	4.5kg		
AC010K	10kg		
AC020K	20kg		

Items can be ordered individually or by box lot.

Amazon & Plants GH Conditioner

Low sodium and phosphate free for sodium sensitive fish such as discus, catfish, *Apistogramma*, horseface, angelfish & tetras. Amazon Conditioner helps your aquarium emulate the waters of the Amazon basin by gently raising the mineral balance. Amazon Conditioner adds the essential minerals, elements and trace elements required by fish native to the Amazon basin and helps with osmosis control. Also supplies essential magnesium and potassium for your plants.

Directions: 1 rounded teaspoon or 8g to 20 litres of water will raise general hardness by approximately 7dGH or 125ppm.

AM150G	150g	Amazon GH Conditioning Salts	48 per box
AM250G	250g		48 per box
AM500G	500g		28 per box

AM02.5K	2.5kg		6 per box
AM04.5K	4.5kg		
AM010K	10kg		
AM020K	20kg		

Items can be ordered individually or by box lot.

American Cichlid GH Conditioner

With added potassium and phosphate free. American Cichlid GH Conditioner adds the essential minerals and trace elements which are insufficient in many town water supplies and rain water. It increases the GH (general hardness) of water, promoting healthy osmosis control for optimum body function and ensuring the good health and longer life of your fish.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise general hardness by approximately 11dGH or 200ppm.

AMC250G	250g	American GH Conditioning Salts	48 per box
AMC500G	500g		28 per box
AMC001K	1kg		16 per box
AMC02.5K	2.5kg		6 per box
AMC04.5K	4.5kg		
AMC010K	10kg		
AMC020K	20kg		

Items can be ordered individually or by box lot.

Fighter GH Conditioner

Phosphate free. Fighter GH Conditioner adds essential minerals, elements and trace elements and increases the GH (general hardness) of water to aid in osmosis control and contribute to the good health and longer life of your bettas.

Directions: 1 pinch per litre or 1 level teaspoon or 5g to 8 litres of water will raise GH by approximately 8dGH or 140ppm.

FC050G	50g	Fighter GH Conditioning Salts	100 per box
FC150G	150g		48 per box
FC250G	250g		48 per box

Items can be ordered individually or by box lot.

Fighter Conditioning Pack

This pack contains everything you need to make your tap water safe, balance the minerals, stabilise the pH, add beneficial bacteria and ensure the perfect water conditions for your betta, all in one neat package.

Contains: 1 x 50ml Fighter Chlorine Neutraliser, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approximately 7.0). The 5 pack also contains Fighter Pellet Food.

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

Items can be ordered individually or by box lot.

Goldfish GH Conditioner

Phosphate free. Goldfish GH Conditioner adds the essential minerals and trace elements which are insufficient in many town water supplies and rainwater. It increases the GH (general hardness) of water, promoting healthy osmosis control for optimum body function and contributing to the good health and longer life of your goldfish. With added potassium.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise GH by approximately 12dGH or 214ppm.

GC050G	50g	Goldfish GH Conditioning Salts	100 per box
GC150G	150g		48 per box
GC250G	250g		48 per box
GC500G	500g		28 per box
GC001K	1kg		16 per box
GC02.5K	2.5kg		6 per box
GC04.5K	4.5kg		
GC010K	10kg		
GC020K	20kg		

Items can be ordered individually or by box lot.

Pond GH Conditioner

Phosphate free. Pond Conditioner increases the GH (general hardness) of water to aid osmosis control in fish. It also adds the minerals, elements and trace elements which are often insufficient in tap water and rainwater, but essential for healthy goldfish and koi.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise GH by approximately 14dGH or 250ppm and raises pH to over 7.4.

PC250G	250g	Pond GH Conditioning Salts	48 per box
PC400G	400g		28 per box
PC900G	900g		16 per box
PC02.2K	2.2kg		6 per box
PC04.5K	4.5kg		
PC010K	10kg		
PC020K	20kg		

Items can be ordered individually or by box lot.

Tropical GH Conditioner

Phosphate free. Tropical GH Conditioner increases the GH (general hardness) of water to aid osmosis control in fish. It also adds the minerals, elements & trace elements which are often insufficient in tap water and rainwater, but essential for healthy tropical community fish.

Directions: 1 level teaspoon or 5g to 8 litres of water will raise GH by approximately 8dGH or 140ppm.

TR050G	50g	Tropical GH Conditioning Salts	100 per box
TR150G	150g		48 per box
TR250G	250g		48 per box
TR500G	500g		28 per box
TR001K	1kg		16 per box
TR02.5K	2.5kg		6 per box
TR04.5K	4.5kg		
TR010K	10kg		
TR020K	20kg		

Items can be ordered individually or by box lot.

Turtle GH Conditioner

Phosphate free. Turtle GH Conditioner increases the GH (general hardness) of water to the level required for good health in aquatic animals. It adds calcium, magnesium and trace elements to water, adjusting the mineral balance to contribute to the good health, strong shell and longer life of your turtles, shrimp, snails, crustaceans and other aquatic animals that require a bit of extra calcium.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise GH by approximately 9dGH or 160ppm.

TC150G	150g	Turtle GH Conditioning Salts	48 per box
TC250G	250g		48 per box
TC500G	500g		28 per box
TC001K	1kg		16 per box
TC02.5K	2.5kg		6 per box
TC04.5K	4.5kg		
TC010K	10kg		
TC020K	20kg		

Items can be ordered individually or by box lot.

Premium KH Buffers

African KH Buffer plus Potassium

Phosphate free. African KH Buffer helps your aquarium emulate the waters of the Great Lakes of Africa. It raises KH (carbonate hardness) and stops pH fluctuation, creating pH stability and reducing stress on fish. It also contains minerals which assist with fish fertility and egg production.

Directions: 1 level teaspoon or 5g to 40 litres of water will raise KH by approximately 6dKH or 106ppm. 1 teaspoon or 5g to 20 litres will raise KH by approximately 12dKH or 214ppm. PH will then stabilise to around 8.5.

AK150G	150g	African KH Buffer	48 per box
AK300G	300g		48 per box
AK600G	600g		28 per box
AK001K	1kg		16 per box
AK02.5K	2.5kg		6 per box
AK04.5K	4.5kg		
AK010K	10kg		
AK020K	20kg		

Items can be ordered individually or by box lot.

Tanganyika KH Buffer

Phosphate free. Tanganyika KH Buffer helps your aquarium emulate the water of Lake Tanganyika. It raises KH (carbonate hardness) and stops pH fluctuation, creating pH stability and reducing stress on fish. It also contains minerals which assist with fish fertility and egg production.

Directions: 1 rounded teaspoon or 8g to 40 litres of water will raise KH by approximately 8dKH or 143ppm. 1 rounded teaspoon or 8g to 20 litres will raise KH by approximately 16dKH or 285ppm. PH will stabilise to around 8.5 to 9.5.

TANG150G	150g	Tanganyika KH Buffer	48 per box
TANG250G	250g		48 per box
TANG500G	500g		28 per box
TANG001K	1kg		16 per box
TANG02.5K	2.5kg		6 per box
TANG04.5K	4.5kg		
TANG010K	10kg		
TANG020K	20kg		

Items can be ordered individually or by box lot.

Amazon KH Buffer - for discus, L. Numbers, apistos

Amazon KH Buffer helps your aquarium water emulate the waters of the Amazon Basin by raising KH (carbonate hardness) without compromising the slightly acidic pH required for fish that come from this region, such as discus, tetras, *Apistogramma* and L-number catfish. It raises KH and locks in pH to approximately 6.5 to 6.8, stopping pH fluctuation, creating pH stability and reducing stress on fish. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 level teaspoon to 8 litres of water will raise KH by approximately 6dKH or 107ppm and stabilise pH to around 6.5-6.8.

DK040G	40g	Discus / L. Catfish KH Buffer	100 pr box
DK120G	120g		48 pr box

DK008K	8kg (10lt pail)		
DK010KB	10kg bag		
DK016K	16kg (20lt pail)		
DK020KB	20kg bag		

Items can be ordered individually or by box lot.

Native KH Buffer 7.5

Native KH Buffer is ideal for Australian and New Guinea native fishes, many of which come from alkaline fresh water or brackish water conditions. It increases the KH (carbonate hardness) of water and stabilises pH, reducing fish stress and contributing to the good health and longer life of your fish. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise KH by approximately 8dKH or 143ppm and stabilise pH to around 7.5.

NA150G	150g	Native KH Buffer	48 pr box

NA02.2K	2.2kg		6 pr box
NA04.5K	4.5kg		
NA010K	10kg		
NA020K	20kg		

Items can be ordered individually or by box lot.

American Cichlid KH Buffer 7.5

American Cichlid KH Buffer helps your aquarium emulate the alkaline waters preferred by Central American Cichlids. It increases the KH (carbonate hardness) of water and stabilises pH, reducing fish stress and contributing to the good health and longer life of your fish. American Cichlid KH Buffer also adds minerals which assist with fish fertility and egg production. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise KH by approximately 8dKH or 143ppm. 1 rounded teaspoon or 8g to 20 litres will raise KH by approximately 4dKH or 72ppm. PH will stabilise to around 7.5.

AMK150G	150g	American Cichlid KH Buffer	48 pr box
AMK250G	250g		48 pr box

AMK02.2K	2.2kg		6 pr box
AMK04.5K	4.5kg		
AMK010K	10kg		
AMK020K	20kg		

Items can be ordered individually or by box lot.

General KH Alkaline Buffer

Phosphate free. For those sensitive situations such as planted tanks running CO₂: General KH Alkaline Buffer slowly raises KH (carbonate hardness) by approximately 1dKH or 18ppm at a time. Being an alkaline buffer, it has a high pH and this counteracts the acidity from the CO₂, stabilising pH and reducing stress on fish. Suitable for both fresh and salt water aquariums.

Directions: 1 level teaspoon or 5g to 60 litres of water will raise KH by approximately 1dKH or 18ppm and will raise and stabilise pH. For planted tanks using CO₂ systems, use cautiously with small doses to avoid large pH increases.

KG150G	150g	General KH Alkaline Buffer	48 pr box
KG250G	250g		48 pr box
KG500G	500g		28 pr box

KG02.5K	2.5kg		6 pr box
KG04.5K	4.5kg		
KG010K	10kg		
KG020K	20kg		

Items can be ordered individually or by box lot.

Goldfish KH Buffer 7.4

Goldfish don't like acid pH, so Goldfish KH Buffer raises KH (carbonate hardness) and stabilises pH at around 7.2 to 7.4pH. This stops stressful and damaging pH fluctuation and contributes to the good health and longer life of your goldfish. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise KH by approximately 8dKH or 143ppm.

GK150G	150g	Goldfish KH Buffer 7.4	48 pr box
GK250G	250g		48 pr box

GK010K	10kg		
GK020K	20kg		

Items can be ordered individually or by box lot.

Neutral KH Buffer 7.0

When pH instability is a problem and pH Up or pH Down are not fixing it (as they are simply band aids on the problem), the solution lies in raising the KH (carbonate hardness) of your water. Neutral KH 7.0 Buffer raises KH, adjusts pH up or down as required and locks pH at around 7.0. This stops pH fluctuation, reduces stress on fish and contributes to their good health and longer life. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise KH by approximately 8dKH or 143ppm and stabilise pH to around 7.0.

NK040G	40g	50ml	Neutral KH Buffer 7.0	100 pr box

NK020KB	20kg	bag		

Items can be ordered individually or by box lot.

Fighter KH Buffer

As many bettas are kept in small volumes of water, their pH is often compromised and becomes acidic, dropping much too low for optimum conditions. Our Fighter KH Buffer raises KH (carbonate hardness), locking pH at around 7.0 to create pH stability, reduce stress on fish and contribute to their good health and longer life. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 pinch per litre or 1 level teaspoon or 5g to 10 litres of water will raise KH by approximately 7dKH or 125ppm and stabilise pH to around 7.0.

FK040G	40g	Fighter KH Buffer	100 pr box
FK120G	120g		48 pr box
FK250G	250g		48 pr box

Items can be ordered individually or by box lot.

Fighter Conditioning Pack

This pack contains everything you need to make your tap water safe, balance the minerals, stabilise the pH, add beneficial bacteria and ensure the perfect water conditions for your betta, all in one neat package.

Contains: 1 x 50ml Fighter Chlorine Neutraliser, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approximately 7.0). The 5 pack also contains Fighter Pellet Food.

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

Turtle & Axolotl KH Buffer 7.2

Water with a low pH is acidic and can cause painful acid burns in turtles and other aquatic animals and soft shell in turtles and snails. Turtle & Axolotl KH Buffer 7.2 raises KH (carbonate hardness,) stabilises pH, reduces stress and stops painful acid burn. With added calcium for strong bones and shells. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise KH by approximately 7dKH or 125ppm & stabilise pH over 7.2.

TK120G	120g	Turtle KH Buffer 7.2	48 pr box
TK250G	250g		48 pr box

TK010KB	10kg bag		
TK016K	16kg pail		
TK020KB	20kg bag		

Items can be ordered individually or by box lot.

Kalkwasser

Phosphate free calcium supplement. When added to a coral reef aquarium, Aqua-Pics Kalkwasser adds vital calcium for the structural growth of corals and invertebrates. Kalkwasser also helps to raise alkalinity, contributing to pH stability in reef aquariums. Unlike many other brands, this product is finely ground to maximise solubility.

Directions: Keep adding powder to 2 litres of fresh water until no more can be dissolved. Then, over a few hours, add this solution very slowly to the aquarium, preferably using a drip system into a moving current.

Premium All-In-One Conditioners

All In One Conditioner - Goldfish

Aqua-Pics All In One Conditioner for Goldfish is an easy-to-use, one-step mineralisation and dechlorination solution for people who don't want to fuss with measuring out multiple products to get their water ready for fish. With just this one product, you can raise the GH (general hardness) and the KH (carbonate hardness) at the same time, stabilising the pH of your aquarium. This product also removes chlorine, making tap water safe for fish. Aqua-Pics All In One Conditioner adds the essential minerals required to aid in the good health & longer life of your fish. Suitable for tap water and rainwater. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 rounded teaspoon or 8g to 5 litres of water will raise GH by approximately 12dGH or 214ppm, raise KH by approximately 8dKH or 143ppm and stabilise pH to around 7.4.

GCC150G	150g tub	Goldfish All In One Conditioner	48 per box

GCC001K	1kg tub		16 per box

All In One Conditioner - Tropical

Aqua-Pics All In One Conditioner for Tropical fish is an easy-to-use, one-step mineralisation and dechlorination solution for people with small or nano freshwater aquariums who don't want to fuss with measuring out multiple products to get their water ready for fish. With just this one product, you can raise the GH (general hardness) and the KH (carbonate hardness) at the same time, stabilising the pH of your aquarium. This product also removes chlorine, making tap water safe for fish. Aqua-Pics All In One Conditioner adds the essential minerals required to aid in the good health & longer life of your fish. Suitable for tap water and rainwater. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 rounded teaspoon or 8g to 5 litres of water will raise GH by approximately 7dGH or 125ppm, raise KH by approximately 7dKH or 125ppm and stabilise pH to around 7.0.

TCC250G	500g tub		28 per box
TCC001K	1kg tub		16 per box

Miscellaneous Conditioners

Acid PH Buffer

This is a phosphate free acid buffer, perfect for sensitive fish, shrimp and plants. Lowers the pH of water & decreases alkalinity and KH (carbonate hardness) without adding phosphates. For the serious fish, shrimp, and aquatic garden aquarium keeper who works hard to maintain a balanced tank. Converts KH into usable CO₂ for the plants to use as required.

Directions: To lower pH, add 2g (1/4 teaspoon) per 80 litres daily until desired pH is achieved. Can be used in conjunction with Aqua-Pics KH Generator to lower the pH locking point as desired.

AB150G	150g	Acid pH Buffer (Phosphate Free)	48 pr box
AB300G	300g		48 pr box
AB600G	600g		28 pr box
AB01.2K	1.2kg		16 pr box
AB02.5K	2.5kg		
AB04.5K	4.5kg		
AB010K	10kg		

Items can be ordered individually or by box lot.

PH Down Powder

PH Down lowers the pH level of water by counteracting alkaline compounds. Lowers pH (increasing acidity) to the correct level required for the good health and longer life of your fish. Contains sodium biphosphate, which will not exacerbate algae. Use as required in small doses to avoid over adjustment. This will gradually decrease pH to optimum levels so as not to stress the fish. Do not overdose. To ensure ongoing pH stability, use an Aqua-Pics KH Buffer.

Items can be ordered individually or by box lot.

PH Up Powder

Phosphate free. PH Up raises the pH level of water by counteracting acid compounds. Increases pH (increasing alkalinity) to the correct level required for the good health and longer life of your fish.

Use as required in small doses to avoid over adjustment, This will gradually increase pH to optimum levels so as not to stress the fish. Do not overdose. To ensure ongoing pH stability, use an Aqua-Pics KH Buffer.

PU050G	50g		PH Up Powder	100 pr box
PU150G	150g			48 pr box

PU04.5K	4.5kg	5 litre pail		
PU010K	10kg	10 litre pail		
PU020K	20kg	20 litre pail		

Items can be ordered individually or by box lot.

Aquarium Salts

Phosphate free. Aquarium Salts raises salinity for fish that require extra sodium, such as many Australian native species, live bearers, and brackish water fish that require higher sodium levels to survive in captivity such as archers and gobies. It also helps to prevent fish diseases and infections, helps control osmosis and aids in the healing process of wounded fish.

Directions: Add 5g per 8 litres directly to your aquarium water when necessary. As a salt bath add 125g to 5 litres of aquarium water in a separate container.

AS150G	150g		Aquarium Salts	48 pr box
AS250G	250g			48 pr box

AS020K	20kg	20 litre pail		

Items can be ordered individually or by box lot.

Bloat-Ex

Phosphate free. Use when fish are suffering from a bloated abdomen, loss of balance or floating to the top of the water. Sometimes these symptoms can be due to a serious condition such as a swim bladder disorder, but often they are a result of constipation or a bowel blockage. Bloat-Ex Bathing Salts contains magnesium sulphate which helps relieve symptoms by aiding in the clearing of any bowel obstructions. Also helpful in clearing internal parasites. Use in conjunction with appropriate medications such as worm treatments if required.

Directions: In a separate container, add 1 tablespoon or 15g of Bloat-Ex to 5 litres of aquarium water. Bathe sick fish in this solution 3 times a day, for 5 to 10 minutes each time until symptoms subside.

BX150G	150g		Bloat-Ex Bathing Salts	48 pr box

BX020K	20kg	20 litre pail		

Items can be ordered individually or by box lot.

Medicating Salts

Phosphate free. Medicating Salts should be added to your aquarium when fish are suffering from disease, bacterial infections, damage from injury, or parasites like whitespot. By raising the salinity, it will help prevent secondary infections and will aid the healing process of your fish. Medicating Salts should be used in conjunction with appropriate medications for the illness you are treating.

Directions: Add 125g per 100 litres directly to your aquarium when necessary. As a salt bath add 125g to 5 litres of aquarium water in a separate container.

MS150G	150g		Medicating Salts	48 pr box
MS250G	250g			48 pr box

MS010K	10kg	10 litre pail		
MS020K	20kg	20 litre pail		

Items can be ordered individually or by box lot.

Potassium Supplement

Most tap water supplies are almost void of potassium and this can result in sick or stunted water plants and poor fertility in your fish. Potassium is essential for healthy plants. It assists with photosynthesis and propagation and helps plants resist disease. Potassium in higher levels promotes fertility in fish, increasing spawning frequency and clutch sizes and increasing the productivity and profitability of your fish hatchery. Phosphate free.

Directions: To improve plant growth, add 1 teaspoon or 5g to 130 litres of water. To improve fish fertility, add 1 teaspoon or 5g to 38 litres of water. This will raise potassium levels by approximately 40ppm.

PS150G	150g		Potassium Supplement	48 pr box

PS020K	20kg			

Items can be ordered individually or by box lot.

Fighter GH Conditioner

Phosphate free. Fighter GH Conditioner adds essential minerals, elements & trace elements and increases the GH (general hardness) of water to aid in osmosis control and contribute to the good health & longer life of your bettas.

Directions: 1 pinch per litre or 1 level teaspoon or 5g to 8 litres of water will raise GH by approximately 8dGH or 140ppm.

FC050G	50g	Fighter Conditioning Salts	100 pr box
FC1500G	150g		48 pr box
FC250G	250g		48 pr box

Items can be ordered individually or by box lot.

Fighter KH Buffer

As many bettas are kept in small volumes of water, their pH is often compromised and becomes acidic, dropping much too low for optimum conditions. Our Fighter KH Buffer raises KH (carbonate hardness), locking pH at around 7.0 to create pH stability, reduce stress on fish and contribute to their good health and longer life. Contains chemically clean phosphates, which should not exacerbate algae.

Directions: 1 pinch per litre or 1 level teaspoon or 5g to 10 litres of water will raise KH by approximately 7dKH or 125ppm and stabilise pH to around 7.0.

FK040G	40g	Fighter KH Buffer	100 pr box
FK120G	90g		48 pr box
FK250G	250g		48 pr box

Items can be ordered individually or by box lot.

Fighter Conditioning Pack

This pack contains everything you need to make your tap water safe, balance the minerals, stabilise the pH, add beneficial bacteria and ensure the perfect water conditions for your betta, all in one neat package.

Contains: 1 x 50ml Fighter Chlorine Neutraliser, 1 x 50g Fighter GH Conditioner, 1 x 50ml Fighter Beneficial Bacteria Booster, 1 x 40g Fighter KH Buffer (for a stable pH of approximately 7.0). The 5 pack also contains Fighter Pellet Food.

FP004	4 Pack	Fighter Conditioner 4 Pack	(No Food)
FP005	5 Pack	Fighter Conditioner 5 Pack	

Kalkwasser

Phosphate free calcium supplement. When added to a coral reef aquarium, Aqua-Pics Kalkwasser adds vital calcium for the structural growth of corals and invertebrates. Kalkwasser also helps to raise alkalinity, contributing to pH stability in reef aquariums. Unlike many other brands, this product is finely ground to maximise solubility.

Directions: Keep adding powder to 2 litres of fresh water until no more can be dissolved. Then, over a few hours, add this solution very slowly to the aquarium, preferably using a drip system into a moving current.

KW125G	125g	250ml	Kalkwasser	48 pr box
KW225G	225g	500ml		28 pr box
KW450G	450g	1 litre		16 pr box
KW01.2k	1.2kg	2 litres		6 pr box
KW02.4K	2.4kg			
KW04.5K	4.5kg			

Items can be ordered individually or by box lot.

Basics Range

Basics is a value for money product but is still made from premium quality chemicals and is equivalent to most GH Conditioners and KH Buffers on the market. Basics corrects GH and KH but does not contain the added health benefits of the more expensive Premium range, such as extra trace elements and minerals to help with egg production, fertility, plant growth, thyroid function and so on.

Basics Tropical GH Conditioner

Phosphate free. Soft water in an aquarium is caused by a lack of minerals and is a major source of stress for many aquatic animals. Basics Tropical GH Conditioner corrects the mineral balance, adding the essential minerals required to help osmosis control and raise the GH (general hardness) of water to the correct level for healthy tropical fish and tropical tank mates such as shrimp and snails.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise GH by approximately 10dGH or 180ppm. For best results, Basics Tropical GH Conditioner should be used in conjunction with Basics Neutral KH Buffer to balance out the pH of your water.

Basics Goldfish GH Conditioner

Phosphate free. Soft water in an aquarium is caused by a lack of minerals and is a major source of stress for many aquatic animals. Basics Goldfish GH Conditioner corrects the mineral balance, adding the essential minerals required to help osmosis control and raise the GH (general hardness) of water to the correct level for healthy goldfish.

Directions: 1 rounded teaspoon or 8g to 10 litres of water will raise the GH by approximately 12dGH or 215ppm. For best results, Basics Goldfish GH Conditioner should be used in conjunction with Basics Neutral KH Buffer to balance out the pH of your water.

Basics African GH Conditioner

Phosphate free. Soft water in an aquarium is caused by a lack of minerals and is a major source of stress for many aquatic animals. Basics African GH Conditioner corrects the mineral balance, adding the essential minerals required to help osmosis control and raise the GH (general hardness) of water to the correct level for healthy African cichlids.

Directions: 1 level teaspoon or 5g to 10 litres of water will raise GH (general hardness) by approximately 12dGH or 215ppm and stabilise pH to around 8.3. For Tanganyika cichlids we recommend using a rounded teaspoon or 8g to 10 litres to achieve general hardness of approximately 19dGH or 340ppm. For Malawi cichlids or a mixed African tank, we recommend aiming for around 16dGH and a pH over 8.0

For best results, Basics African GH Conditioner should be used in conjunction with Basics African KH Buffer to balance out the pH of your water.

Basics Amazon GH Conditioner

A low sodium & phosphate free conditioner for planted aquariums and sodium sensitive fish such as discus, corydora catfish, angel fish, *Apistogramma* & South American tetras. Soft water in an aquarium is caused by a lack of minerals and is a major source of stress for many aquatic animals. Amazon GH Conditioner gently corrects the mineral balance, adding the essential minerals required to aid in osmosis control and raise the GH (general hardness) of water to the correct level for healthy Amazonian fish.

Directions: 1 rounded teaspoon or 8g to 20 litres of water will raise the GH by approximately 7dGH or 125ppm.

For best results, Basics Amazon GH Conditioner should be used in conjunction with Basics Neutral KH Buffer to balance out the pH of your water.

Basics Neutral KH Buffer

When pH instability is a problem and pH Up or pH Down are not fixing it (as they are simply band aids on the problem), the solution lies in raising the KH (carbonate hardness) of your water. Basics Neutral KH Buffer raises KH, adjusts pH up or down as required and locks pH at around 7.0. This stops pH fluctuation, reduces stress on fish and contributes to their good health and longer life.

Directions: 1 rounded teaspoon to 10 litres of water will raise the KH by approximately 6dKH or 100ppm and balance pH to around neutral 7.0.

For best results, Basics Neutral KH Buffer should be used in conjunction with the appropriate Basics GH Conditioner.

Basics African KH Buffer

African KH is a phosphate free buffer designed for fish from the Great Rift Lakes of Africa. It raises KH (carbonate hardness) by adding minerals which are often missing from tap water and rainwater and stabilises pH to over 8.0, stopping pH fluctuation to create pH stability and reducing stress on fish.

Directions: 1 teaspoon to 20 litres of water will raise the KH by approximately 8dKH or 140ppm and balance pH to over 8.0. For best results, Basics African KH Buffer should be used in conjunction with Basics African GH Conditioner.

Chlorine & Chloramine Removers

Chlorine Neutraliser

Chlorine Neutraliser is for neutralising chlorine, chloramine and ammonia in tap water. It also binds up fluoride and heavy metals such as copper, adds Vitamin B1 and provides fish with a synthetic slime coat.

Chlorine Neutraliser helps protect fish from the harmful chemicals and stress caused when doing regular water changes to remove excess organic load.

Directions: Add to tap water whenever you are topping up or doing water changes. Add 5ml to 40 litres of tap water.

CN050M	50ml	Chlorine Neutraliser	44 pr box
CN125M	125ml		30 pr box

CN001L	1 litre		18 pr box
CN002L	2 litres		
CN004L	4 litres		
CN010L	10 litres		

Items can be ordered individually or by box lot.

Chlorine Eliminator Concentrate

Five times the strength of Chlorine Neutraliser! Chlorine Eliminator Concentrate is for eliminating chlorine, chloramine and ammonia from tap water. It also binds up fluoride and heavy metals, adds Vitamin B1 and provides fish with a synthetic slime coat.

Chlorine Eliminator Concentrate helps protect fish from the harmful chemicals and stress caused when doing regular water changes to remove excess organic load.

Directions: Add to tap water whenever you are topping up or doing water changes. Add 1ml to 40 litres or 5ml to 200 litres of tap water.

CE050M	50ml	Chlorine Eliminator	44 pr box
CE125M	125ml		30 pr box

Items can be ordered individually or by box lot.

Chlorine Eliminator – Pond Super Concentrate

Chlorine Eliminator Pond Strength is for eliminating chlorine, chloramine and ammonia from tap water. It also binds up fluoride, heavy metals, adds Vitamin B1 and provides pond fish with a synthetic slime coat.

Chlorine Eliminator Pond Strength helps protect pond fish from the harmful chemicals and stress caused when doing regular water changes to remove excess organic load.

Directions: Add to tap water whenever you are topping up or doing water changes to your pond. Add 5ml to 200 litres of tap water.

CEP050M	50ml	Chlorine Eliminator	44 pr box
CEP125M	125ml		30 pr box

Items can be ordered individually or by box lot.

Chlorine Neutraliser for Fighters

Chlorine Neutraliser for Fighters is for neutralising chlorine, chloramine and ammonia in tap water. It also binds up fluoride and heavy metals such as copper and slime coats the fish to protect them.

Chlorine Neutraliser helps protect fish from the harmful chemicals and stress caused when doing regular water changes to remove excess organic load.

Directions: Add to tap water whenever you are topping up or doing water changes. Add 1 drop to 1 litre of water.

CNF050M	50ml	Chlorine Neutraliser	44 pr box
CNF125M	125ml		30 pr box
CNF250M	250ml		24 pr box

Items can be ordered individually or by box lot.

Chlorine Neutraliser for Turtles

Chlorine Neutraliser for Turtles is for neutralising chlorine, chloramine and ammonia in tap water. It also binds up fluoride and heavy metals such as copper and helps protect the turtle's skin.

Chlorine Neutraliser helps protect turtles from the harmful chemicals and stress caused when doing regular water changes to remove excess organic load.

Directions: Use with tap water whenever you are topping up or doing water changes on your turtle enclosure. Add 5ml to 40 litres of water.

CNT050M	50ml	Chlorine Neutraliser Turtle	44 pr box

Items can be ordered individually or by box lot.

Protecta Coat

Protecta Coat contains fresh organic aloe vera to help promote healing and regenerate damaged tissue while also forming a protective synthetic slime coat around your fish. Perfect for use when transporting fish or when injured or diseased fish are undergoing treatment. Suitable for fresh and salt water.

Directions: To protect fish with a slime coat and help repair damaged fins, scales and skin, add 5ml to 50 litres of aquarium water.

To remove chlorine, chloramine, ammonia and heavy metals from tap water, add 5ml to 100 litres of water.

PRC050M	50ml	Protecta Coat	44 pr box
PRC125M	125ml		30 pr box

PRCP010L	10 litres		

Items can be ordered individually or by box lot.

For Algae

Algae Starver Fresh Water Aquarium

Liquid phosphate remover - dramatically reduces phosphates. Algae Starver is a liquid phosphate remover, reducing the phosphates to such a low level that it starves the algae, causing it to perish. Controls the algae, leaving you with an algae free aquarium. Safe for fish, shrimp, snails, turtles and other aquatic life. 1 litre treats up to 20,000 litres of water.

Directions: Add 5ml to 100 litres of water every 2 to 3 days. If phosphate levels are greater than 1ppm, Algae Starver should be used at 5ml to 50 litres until algae subsides. Once you have completed the treatment, take a water sample to your aquarium or pond professional to be tested for phosphates. Once you have achieved a phosphate level of less than 0.02ppm you should add a maintenance dose of 5ml to 100 litres every 2 weeks. More effective in alkaline water. Acidity can reduce effectiveness.

ASA125M	125ml	Algae Starver Phosphate Remover	30 pr box
ASA250M	250ml		24 pr box
ASA500M	500ml		16 pr box
ASA001L	1 litre		18 pr box
ASA002L	2 litres

Items can be ordered individually or by box lot.

Algae Starver Pond Strength

Concentrated liquid phosphate remover - dramatically reduces phosphates. Algae Starver Pond Strength is a liquid phosphate remover, reducing the phosphates to such a low level that it starves the algae, causing it to perish. Controls the algae, leaving you with an algae free pond or lake. Safe for fish, shrimp, snails, turtles and other aquatic life. 1 litre treats up to 100,000 litres of water.

Directions: Add 5ml to 500 litres of water every 2 to 3 days. If phosphate levels are greater than 1ppm, Algae Starver should be used at 5ml to 250 litres until algae subsides. Once you have completed the treatment, take a water sample to your aquarium or pond professional to be tested for phosphates. Once you have achieved a phosphate level of less than 0.02ppm, add a maintenance dose of 5ml to 500 litres every 2 weeks.

More effective in alkaline water. Acidity can reduce effectiveness.

Clear Water Algae Block for Aquariums & Ponds

Clears green matter for a sparkling clear aquarium or pond. Clear Water Algae Block has a slow release delivery system that helps to condition the water and clear the unsightly green matter in your aquarium or pond. When used strictly as directed, it is harmless to fish, plants and filter systems.

Each block has 6 squares and each square treats 200 litres of water. 1 block of 6 squares treats 1,200 litres of water.

CWB001	20g Single hang sell	Clear Water Algae Block	Treats 1,200lt
CWB006	6 pack hang sell		Treats 7,200lt
CWB060	60 pack bulk bag		Treats 72,000lt

Barley Straw Extract - Aquarium Strength

A natural algae inhibitor. Barley Straw Extract helps to condition water and naturally control the unsightly green matter. Regular use will ensure that your pond has the microbes and enzymes required to prevent green matter building up and will help keep your pond water clean. When used strictly as directed, it is harmless to filter systems, and can be used without harmful effects to fish, plants and other aquatic life.

Directions: Add 5ml for each 60 litres of water. To prevent green matter recurring, repeat dose every 2 weeks.

ACP002L	2 litres		
ACP004L	4 litres		
ACP010L	10 litres		

Items can be ordered individually or by box lot.

No More Black Beard

Black Beard algae can be a virulent problem that occurs in many planted aquariums. It is unsightly and can result in poor plant growth. To solve this problem you need to raise the carbon level of the water. This promotes plant growth and inhibits the growth of the black beard algae. No More Black Beard destroys the cells of the black beard algae and prevents it from photosynthesizing, then breaks down into a usable carbon source for the plants, helping them to flourish. When bearded algae becomes a problem, you should add No More Black Beard to your aquarium or pond for lush green plant growth.

Directions: Begin with a major water change of 30-40%. For first dose, add 5ml for each 50 litres of water, then add 1ml per 40 litres water every 2 days for 1 to 2 weeks. Water should be kept well-aerated. Repeat as instructed if necessary. Use strictly as directed. Do not overdose!

NMB050M	50ml	No More Black Beard	44 pr box
NMB125M	125ml		30 pr box
NMB250M	250ml		24 pr box

NMB010L	10 litres		

Items can be ordered individually or by box lot.

Blue Lagoon - Block Out, Blue Pond Dye

Reduces algae by reducing light penetration naturally and filtering UV light from the sun. Dosage can be increased as required without harming fish but this may affect plant growth. Does not contain any methylene blue, fungicide or algacide. Contains: Polymeric colorant developed in the USA.. 1 litre treats up to 40,000 litres of water.

Directions: Add 5ml to 150-200 litres of water. Always shake well before use.

Items can be ordered individually or by box lot.

For Plants

Carbo-Max – Professional Grade Liquid Carbon Supplement

Like liquid CO₂! Carbo-Max is designed to deliver optimum results and thick, lush plant growth. Carbo-Max is a concentrated liquid organic carbon sauce for plants.

Directions: Before first use, do a 30% to 40% water change, then add 5ml to 50 litres of well aerated water. Then add 1ml to 40 litres every 1 to 3 days. Use with Aqua-Pics Plant Max and Iron Max for best results.

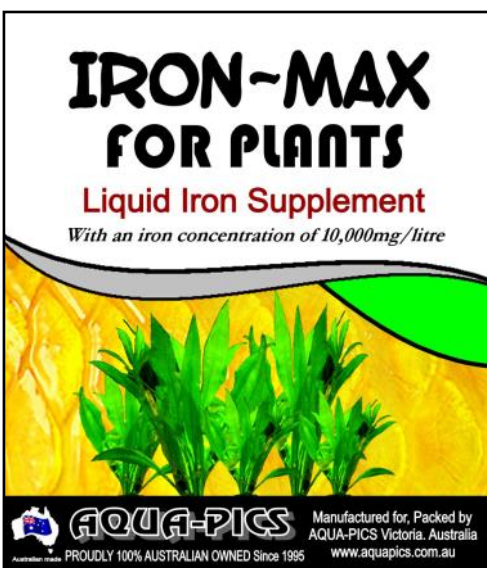

CM050M	50ml	Carbo-Max Liquid Carbon	44 pr box

Items can be ordered individually or by box lot.

Iron-Max – Professional Grade Liquid Iron Supplement

Iron-Max is designed to deliver optimum results and thick lush plant growth. Iron-Max is a concentrated solution of 10,000mg/litres of iron at a dose rate of only 5ml to 50 litres of water, providing excellent value.

Directions: Always check iron levels first before adding Iron-Max. We recommend doing a 20% to 30% water change before use and then adding 5ml to 50 litres of water every 1 to 2 weeks or as required. Use with Aqua-Pics Plant-Max and Carbo-Max for best results.

Items can be ordered individually or by box lot.

Plant-Max – Professional Grade Liquid Aquatic Plant Food

Rain water & most town water supplies are deficient in most plant nutrients, while aquarium water is usually high in nitrogen and phosphorus. Therefore you need the right aquatic plant food specifically designed for planted aquariums. Plant-Max is nitrogen and phosphorus free and will provide the essential plant nutrients required for thick, flourishing fresh water plant growth.

Directions: Plant-Max has a potency of 0.3% total dissolved nutrients at a dose rate of only 5ml to 50 litres of water. Add Aqua-Pics Plant-Max once every two weeks or after each water change. Use with Aqua-Pics Iron-Max and Carbo-Max for best results. Safe for fish, snails and shrimp when used as directed.

PM002L	2 litres		
PM004L	4 litres		
PM010L	10 litres		

Items can be ordered individually or by box lot.

Plant-Max Pro

Complete aquatic plant food for heavily planted and aquascaped aquariums needing a professional grade fertiliser. Rainwater and most town water supplies are void or almost void of plant nutrients. So to get optimum results, with lush greens and brighter reds, you should add Aqua-Pics Plant-Max Pro in conjunction with Aqua-Pics Iron-Max and Carbo-Max. Safe for fish, snails and shrimp when used as directed.

Plant-Max Pro was developed by a professional aquarium plant grower with over 45 years experience supplying the aquatic industry with plants. It contains the perfect levels of essential minerals, compounds, macro and micro nutrients required for a professional standard, heavily planted aquarium.

Directions: Add Aqua-Pics Plant-Max Pro once every two weeks or after each water change. Add 5ml to 100 litres of water. This will raise the plant nutrients by approximately 0.3% total dissolved active nutrients for flourishing, thick fresh water plant growth.

Plant Tabs – Professional Grade Plant Fertiliser Tablets

Plant Tabs are a slow release plant food containing trace elements, calcium, magnesium, iron, zinc and boron. Designed for optimum results with substrate feeding plants, producing thick lush plant growth and healthy flowers. Each tablet will feed up to a 26cm diameter pot, and can be broken into 2 or 4 pieces for smaller areas or to be spread around the pot for more even fertilisation. Plant Tabs are easy to use with no messy mixing or measuring.

Directions: Simply push a tablet into the gravel or sand around the roots of your plants, avoiding direct contact with the root system. Tablets should be placed below the surface of the gravel or sand. For aquarium plants use 1/4 of a tablet near the root systems.

PFT005P	5 pack	Slow release Tablet Plant Food	24 pr Box
PFT010P	10 Pack		12 pr Box

Items can be ordered individually or by box lot.

Lily Tabs – Professional Grade Lily Fertiliser Tablets

Lily Tabs are a slow release plant food containing trace elements, calcium, magnesium, iron, zinc and boron. Designed for optimum results with water lilies and other substrate feeding plants, producing thick lush plant growth and healthy flowers. Each tablet will feed up to a 26cm diameter pot, and can be broken into 2 or 4 pieces for smaller areas or to be spread around the pot for more even fertilisation. Lily Tabs are easy to use with no messy mixing or measuring.

Directions: Simply push a tablet into the gravel or sand around the roots of your plants, avoiding direct contact with the root system. Tablets should be placed below the surface of the gravel or sand. For aquarium plants use 1/4 of a tablet near the root systems.

Miscellaneous Chemicals

Bacta-Boost L - Beneficial Bacteria Starter

Bacta-Boost is a super concentrated liquid beneficial bacteria supplement with hundreds of thousands more bacteria than certain other brands. Bacta-Boost L supplies the beneficial microbes and enzymes required to break down waste and convert toxic ammonia and nitrites to nitrates. Aquarium plants and regular water changes then control the nitrates. For fresh and salt water.

Directions: For the first treatment, add 5ml to 25 litres of well aerated water. For subsequent treatments, add 5ml to 50 litres of well aerated water every 7 to 14 days, or with each water change. 1 litre treats up to 10,000 litres of water.

Bacta-Boost D

100% natural bio-starter and ammonia and nitrite reducer. Bacta-Boost D is a super concentrated dry bacteria supplement which supplies the beneficial microbes and enzymes required to break down waste and convert toxic ammonia and nitrites to nitrates. Aquarium plants and regular water changes then control the nitrates. For fresh and salt water.

Directions: For the first dose, add 1 level teaspoon or 3g for each 100 to 300 litres of water. Then twice a week, add 1/2 teaspoon or 1.5g for each 100 to 300 litres of water for 4 to 8 weeks. Repeat this dosage with each water change.

BBF125M	125ml		30 pr box
BBF250M	250ml		24 pr box

Items can be ordered individually or by box lot.

Cycle-Right Bacteria Food - For Fishless Cycling

There are now two ways to begin a cycle in a new aquarium! Traditionally we have used fish to produce waste that converts into ammonia to feed the beneficial bacteria. This can create a lot of damage and stress to these fish. There is a better way!

Using Cycle-Right, you can now add chemically-clean ammonia directly to the aquarium. By monitoring the ammonia level regularly, keeping it between 1 and 2ppm, you can cycle your tank safely and efficiently without causing harm to any aquatic creatures in the process. Keep away from children. Do not use while fish are in the tank.

Directions: For first dose, add 20ml per 100 litres. Test your aquarium water daily and keep adding Cycle-Right as required to maintain ammonia levels between 1 and 2 ppm. After 7 days, start testing daily for both nitrites and ammonia. Once ammonia is between 1 and 2ppm AND nitrite is zero for 4 days in a row, stop adding Cycle-Right. Wait 24 to 48 hours and retest. Nitrite and ammonia should both be zero. Now add your fish.

CR050M	50ml	Cycle-Right	44 pr box
CR125M	125ml		30 pr box

CR002L	2 litres		

Items can be ordered individually or by box lot.

Black Water Extract

Adds the natural tannins, humic acids and antioxidants that tropical fish are accustomed to in their natural environment. Black Water Extract is a natural spawning aid and colour enhancer. Your fish will become healthier and their colours will intensify and become more brilliant.

Directions: Add 5ml to 40 litres of water weekly, or after each water change. If general hardness is over 18dGH, use 10ml to 40 litres of water.

Crystal Clear Aquarium - Fine Particle Clarifier

Crystal Clear clears cloudy water by binding together fine, floating organic particles to make them big enough for your filter system to capture and remove.

Directions: Add 5ml to 50 to 100 litres of aquarium water, depending on the amount of suspended organic matter. Clears water over approximately 1 to 3 days. To prevent cloudy water recurring, repeat after cleaning or whenever necessary.

CCA050M	50ml	Crystal Clear Aquarium Strength	44 pr box

CCP010L	10 litres		

Items can be ordered individually or by box lot.

Snail Away

For the eradication of unwanted snails in the aquarium. This is a copper based treatment that needs to be used strictly as directed. It should not be used in tanks housing shrimp, other crustaceans, or invertebrates. Some plants can also be sensitive to copper, and may be affected by treatments containing copper. If your fish show signs of stress after treating with Snail Away, do a 30% water change immediately.

Directions: Add 5ml to 40 litres of water every 7 to 14 days until snails have started dying. Wait 2 weeks, then do a 30% water change. If more treatment is required, wait 2 weeks before commencing.

SA050M	50ml	Snail Away	44 pr box

SA250M	250ml		24 pr box
SA500M	500ml		16 pr box
SA001L	1 litre		18 pr box

Items can be ordered individually or by box lot.

Shrimp Calcium - for shrimp, snails & other shelled invertebrates

Shrimps, snails and other aquatic invertebrates require calcium in their environment. We recommend you maintain your aquarium's calcium levels as it is an essential mineral for optimum health, growth and shedding with shelled invertebrates. If calcium levels are low or depleted, this will reduce or inhibit the ability of many organisms to grow or repair themselves if they are damaged.

Directions: Always add this product into flowing water to disperse calcium throughout the aquarium. Adding 1ml to 20 litres or 5ml to 100 litres of water will raise calcium levels by approximately 10ppm.

Filtration

Filter Wool Sheet

Our Premium quality Filter Wool Sheet is manufactured specifically for use in aquariums. It captures both coarse and fine particulate matter before it passes through the other stages of your filter system. Made from extra dense (300 gsm), 40mm thick, thermally bonded polyester fibre, this is a firm aquarium filtration media which resists compression and is less likely to slump or collapse under water pressure. Our Filter Wool is safe for all aquarium life. It is quick and convenient to replace and suitable for any type of filtration which uses filter wool, including canister filters, trickle systems and top filters. Many filter wools are made from material designed for sewing crafts or air conditioning rather than aquariums. They often collapse, need more frequent replacement, and may contain harmful chemicals or toxins. Don't risk your fish! Use Aqua-Pics Premium quality Filter Wool.

Directions: Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.

Filter Matting - Heavy Duty Fine

Our fine Heavy Duty Filter Matting is perfect for the final stage of filtration, capturing fine particulate matter that has passed through the other stages of your filter system, effectively polishing the water before it is returned to the aquarium. Unlike traditional filter wool, this product can be cleaned many times before requiring replacement, making it exceptionally good value. Our Heavy Duty Filter Matting is easy to cut to size and easy to clean. Suitable for any type of filtration. 25mm thick.

Directions: Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.

Filter Pads - 2 Pack

Our fine heavy duty Filter Pads are perfect for use in the built-in filters found in many of the “complete” tanks available. Captures particulate matter from the aquarium, effectively polishing the water before it is returned to the aquarium. Unlike traditional filter wool, this product can be cleaned many times before requiring replacement, making it exceptionally good value. Our heavy duty Filter Pads are easy to cut to size and easy to clean. Suitable for many types of filtration. Each pack contains 2 pads—30cm x 9cm x 5mm thick.

Directions: Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.

FMDGC30x9	2 pack	Filter Pads

Filter Sponge

Our Filter Sponge has the perfect density to hold the maximum volume of particulate matter without rapid clogging. Designed to maximise surface area for a flourishing beneficial bacteria culture which will break down the organic matter held within the sponge fibres. Filter Sponge is easy to cut to size and easy to clean. Suitable for any filter system which uses sponge pads as a media.

Directions: Cut to shape and size required. Rinse well before use. Place media into appropriate chamber of your filter.

Pre Filter Intake Sponge

Our Pre Filter Intake Sponges have the perfect density to hold a maximum volume of particulate matter without rapid clogging. Available in 3 different hole sizes - they easily slide over almost any filter intake tube and allow maximum filtration while preventing young fish or shrimp from being sucked into your power filter. Pre Filter Sponge is easy to remove and clean. (Intake tube is not provided with sponge).

Directions: Rinse well before use. Place over filter intake grill.

PFS001SH	Small (8mm) hole	Pre Filter Intake Sponge
PFS001MH	Medium (12mm) hole	
PFS001LH	Large (25mm) hole	

Peat Pouches

Peat Pouches are an all natural way to add tannins, humic acids and microbes to your tank. These are beneficial to all blackwater species of fish and crustaceans. Suitable for use in aquariums or ponds. Lowers pH naturally in a clean, convenient way. Our pouches contain a proprietary blend of peats to help balance the different microbes in your aquarium or pond and barley straw to help prevent algae growth.

Add 1 pouch per 100 litres of water to your filter or into flowing water. For best results, remove any carbon from your filter. Replace pouch every 4 weeks.

One pouch treats 100 litres of water. Rinse before use. Can be added directly to the aquarium or pond, or placed into a filter system. For best results, remove carbon and replace pouch every 4 weeks.

PP100L	Single pouch for 100 litres hang sell	Peat Pouches
PP200L	Twin pouches for 200 litres hang sell	

Premium Activated Carbon

Aqua-Pics Premium Activated Carbon is a perfect micro-organic water treatment system. With a surface area of over 700m² / g, it has a much greater absorption capacity than regular charcoal & contains up to 3 times more minerals. Clears brown tannin stained water and absorbs surplus chloride ions, purifying the water for a crystal clear aquarium. Rinse well before use. Place media into appropriate chamber of your filter.

PAC150G	150g	Premium Activated Carbon
PAC300G	300g

Net Bags

Net bags are designed to hold any type of loose media such as bio-noodles, ceramic media, zeolite or carbon. Makes removal of media for replacement or cleaning much easier. Available in three sizes, with zip closure. Small size shown in picture.

NB002S	15 cm x 21cm—small with zip	Net Bag
NB001M	30cm x 25cm—medium with zip	
NB003L	36cm x 38cm—large with zip	

Macro-Pure Nitrate & Tannin Remover

Aqua-Pics Premium Macro-Pure is a macroporous synthetic polymer resin filter media that has a much greater absorption capacity than many other similar products available. Rapidly clears brown tannin-stained water and absorbs nitrates by filtering nitrogenous waste. It is a perfect treatment system which purifies your water for a crystal clear aquarium. Macro-Pure will not interfere with other treatments such as KH buffers or GH generators.

Directions: Rinse well before use in a fine mesh bag (such as Macro-Socks), then place the bag of Macro-Pure in your filter. 100ml will treat up to 480 litres of water for up to 6 months. 5 litres will treat up to 24,000 litres of water for up to 6 months.

When Macro-Pure is exhausted it can be recharged in a 6% salt solution (2 handfuls of non-iodised salt to 1 litre of water) for 12 hours. Rinse well before use. Once the Macro-Pure becomes significantly darker in colour, or after 4 to 5 recharges in the salt solution, it will need to be recharged in a 50% bleach solution for optimum results.

MAC050M	50ml	Macro-Pure
MAC100M	100ml

Macro-Socks

Aqua-Pics Premium Macro-Socks are a reusable, ultra fine bag which is ideal for holding synthetic polymer resins such as Macro-Pure, carbon, zeolite, or any other filter media that needs to be contained in a bag.

Available in Small—9cm x 22cm and Medium—16cm x 25cm.

SOC02PS	Small 2 pack	Macro-Socks
SOC02PM	Medium 2 pack	

Miscellaneous & Accessories

Air Stones

An air stone is a simple aerating device which can be added to any 4mm airline. Creates bubbles and current to break the surface tension, allowing gaseous exchange between water and air, and oxygenating the water for beneficial bacteria, fish and plants. As well as being practical, air stones produce an attractive bubble effect in your aquarium.

AST004	4"	Air Stone

AST006	6"	Air Stone
AST006B	6" 12pk	Air Stones
AST2100P	2" grey cylindrical 100pk	Air Stones

One Way Check Valves

Check Valves should be fitted in the air line approximately 150mm (6 inches) from the air pump and are designed with a silicone one-way reed-type valve so air can flow to your equipment in the aquarium without too much restriction. In the event of a power failure, water can potentially syphon back down the air line into your pump, causing damage to the pump and electrical shorting, or even worse drain your tank. These simple one-way check valves stop the water draining out, preventing any water damage to your pump or home. A tiny investment to potentially save costly damage.

Aqua Mesh

Aqua Mesh is a long-life, heavy duty, flexible mesh which comes in various widths and lengths with 6mm or 1.1mm holes.

Aqua Mesh originates from the oyster growing industry and is a good universal semi-rigid mesh with many uses including sump overflows, attaching moss-type plants, for making tank dividers, and for homemade fish saving devices or fry boxes, and so on. Colour could be grey, black or brown.

CO₂ Refill Kit

Aqua-Pics CO₂ Refill Kit supplies the chemicals required for easily and conveniently making CO₂ to refill aquarium CO₂ systems. To create CO₂, blend equal parts of Acid Part A with Alkaline Part B. Add the 200g bag of Part A and the 200g bag of Part B to the CO₂ reaction chamber. Ensure the thread on the chamber is dry and kept free from powder. Be sure to tilt the reaction chamber on a 45 degree angle before adding 300ml of water. This will avoid an over reaction.

CO2R400	CO ₂ Refill Pack
