
TIMBREN SES VS. AIR BAGS DO YOU KNOW THE DIFFERENCE?

You probably sell air bag systems that are designed to assist the existing suspension on trucks used for towing and hauling. As you know, air bag systems are great. If they weren't, you wouldn't offer them to your customers. But not everyone wants a product that requires constant attention and button pushing each and every time they need to tow or haul.

In fact, most customers that walk through your doors are looking for a simple *set-it-and-forget-it* product that will work without them having to think about it or take extra steps. For those customers show them a simple Timbren SES kit. They come with all the benefits of an air bag system but without any of the extra fuss.

Customers can safely maintain a level load while towing and hauling with a Timbren SES kit that does it all for them. No airing up or down, no maintenance, no sag, no fuss.
