Ring Size Guide

Make sure to download the file from the link above and print with the zoom scale set to 100%
Use a ruler to verify the scale is **exactly** as below

Match the inside diameter of an existing ring (that is not bent or damaged) to a circle below to determine its size.

The inside diameter of the ring should just touch the outside of the circle - the sizing circle should just be visible inside the ring. If you cannot see the circle, you are on a circle larger than your size.

Just Remember!

Different fingers have different sizes,
so make sure to test all your rings!

The sizing circle should be visible like so.
