

# Chocolate Oat Milk with Added Protein

## Enhanced Solubility & Neutral Flavour

Oat milk is enjoying a lot of success as an alternative to dairy-based milk drinks. It is considered to be the closest to dairy in terms of flavour and mouthfeel and has been embraced by consumers the world over. It has been effectively used as stand-alone beverage as well as in value-add options. A range of interesting flavours and pack formats have allowed for consumption across multiple day parts and occasions.

The second generation oat milk products now on the market also add something extra along with the standard vitamin and calcium fortification. Buntine Protein® works well as an additional ingredient in oat milk, adding protein as well as a creamier mouthfeel. This may also allow for a reduction in fats for a similar 'richness', again comparing well to dairy.

This prototype is our standard DCF Chocolate Oat Milk with Buntine Protein® added at a rate to match the protein level in dairy milk. With a total of 3.3g of protein, this compares well with plain milk as well as dairy-based choc milks on the market.

### Legal Ingredient Declaration

Water, West Australian Oats (11%), Buntine Protein® (3.5%), Cocoa Powder (2%), Sugar, Cold Pressed Sunflower Oil, Sea Salt, Natural Flavour, Citrus Fibre, Calcium Carbonate, Riboflavin, Vitamin D, Vitamin B12.

### Allergen Statement

Contains: gluten (oats), lupin

### Nutritional Profile
