

MICHAEL PHELPS

Chilly

GOAT™

COLD TUBS

 BY MASTER SPAS®

# Quick Start-Up Guide

Harness the power of cold-water therapy with your Michael Phelps Chilly GOAT™ Cold Tub by Master Spas. This step-by-step guide will ensure a smooth set-up process.

# 1 PLANNING FOR ACCESS AND VENTILATION

Place your Chilly GOAT on a flat, level surface. A concrete pad is ideal. Just be sure that the foundation can support the weight of the cold tub when filled with water.

When choosing a location, it's also important to consider the length of the power cord and space for access and ventilation. The Chilly GOAT cord is 12 feet long. In addition, Master Spas recommends having 6 feet of clearance on the front side for adequate ventilation of the heat pump and 2 feet of access on the other sides.

Move your Chilly GOAT into place and wait 24 hours before beginning the start-up process.

Install on a flat level surface, a concrete pad is ideal

# 2 OPEN VALVES

Remove one skirt cabinet panel, and one trim strip to access the equipment. The equipment end panel will be the short side with the top deck, and it is the primary access point for most equipment and startup processes. First unscrew the trim strip. Then, remove the panel by lifting up the section until it stops and then pulling the bottom outward at an angle to unhook it from the channel. With skirt panel removed from the equipment end, you can check that all unions are secure. Also, check that all slice valves are open and in the up position. These connections and valves can shift or loosen during the shipping process. Before filling, make sure the internal ball valve, between the circulation pump and heat pump, is in the open position. This valve should be turned to its open position, handle in-line with the plumbing, when filling and draining. It needs to be in the closed, perpendicular handle position when the unit is running.

## FILLING YOUR COLD TUB

Attach a prefilter to your garden hose. Place the hose in the cold tub and turn on the water. Once the water reaches the filter housing, turn off the water and remove the pre-filter. Then, put the hose into the cold tub's filter housing port (filter removed). Turn on the hose for a few seconds and then back off. Place the filter into the housing. (Keep the garden hose available for Step 5.)

Before plugging in and powering up, turn the internal ball valve to its closed position.

## SET UP DRAIN LINE

It is normal for there to be condensation. To protect your cold tub, you need to connect the manufacturer installed drain line. You'll find the drain line on the long side of the Chilly GOAT below the cabinet. Attach the provided clear 3/8" ID hose to couple and route the drain line away from the unit, making sure not to allow water to return toward the Chilly GOAT.

# 5

## TURN THE POWER ON TO THE COLD TUB

Once your cold tub is filled with water, and you've turned the ball valve to its closed position, it's time to plug in your cold tub. The circulation pump should start up immediately. If you hear the pump running but there is no water flow circulating, turn off/unplug from power within 1 minute. Place the garden hose into the filter port (filter removed) and turn on the flow of water for a few seconds. Reinsert filter and power up the unit again. You should see water circulating within a few seconds of powering up, but do not allow the circulation pump to run without water flow for more than 1 minute.

## SELECT TEMPERATURE

Turn on power to the chiller. Press the power button for 2 seconds. You can press the “M” button to switch between the heating and cooling modes.

To change the temperature, press the up or down buttons accordingly.

## CONNECTING TO THE SMART LIFE APP AND CONTROLLING YOUR COLD TUB

Your Chilly GOAT Cold Tub has a 2.4GHz WiFi connectivity option. You can take advantage of this feature to control your heat pump and temperature setting.

To get started, download the Smart Life app, which is available on the Google Play or Apple App stores. Sign up and register to create your account.

With your cold tub turned on, make sure that the circulation pump is moving water through the chiller.

Open the Smart Life app on your phone and log in to your account. Click the “+” in the upper right corner and select “Add Device.” Follow the directions on the app to add “Pool Heat Pump.”

**NOTE:** It might take several times to pair your cold tub depending on the strength of your WiFi signal. Retry as needed or provide a stronger 2.4GHz WiFi signal to the area where the cold tub is located.
