# Glove80 Quick Start Guide

To get started, we suggest you first read the Glove80 User Guide. But if you really can't wait:

# 1. Re-leveling the feet

Glove80 may need re-leveling to ensure it sits flat and stable on your desk. To re-level, simply place Glove80 on a flat surface and turn the adjustable legs until all feet are touching the desk.

# 2. Charge before use

The batteries may have discharged during shipping. So if the keyboard doesn't work straight away, don't worry: please plug in both sides to charge and try again.

### 3. Changing the keycaps

If you want to rearrange the keycaps, it is very important to hold the keyswitch down while removing the keycap:

- Use the included small wrench to hold the switch body down as pictured.
- Gently pull the keycap off using the keycap puller, using a wiggling motion.
- You should never have to use force to remove a keycap!
- Be sure to read the step by step instructions on page 31 of the Glove80 User Guide WARNING: Serious damage to PCB may happen if you do not follow the instructions

### 4. Connecting to the host with USB

- Plug in the USB cable to the left half of your Glove80.
- Plug in the other side of the USB cable to a host such as a PC.
- Switch on both the left and right halves by pushing the power button on each half.

# 5. Typing

- Place your palms on the palm rests.
- Place your fingers on the home row of the keyboard, with your index fingers on "F" and "J" respectively.
- Start typing!

Glove80 has many other features and capabilities. Please refer to the User Guide for details.
