

Alogenic Agricultural Aloe Vera Range of Products.

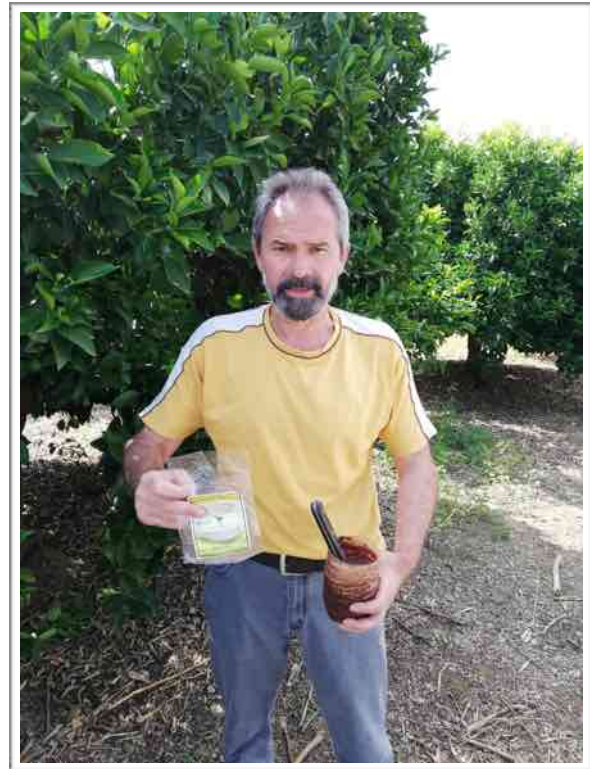

Testimonial for Selcuk Akin Orchard, (5th August 2020) **Kozan, Adana, Turkey**

Just to keep you up today on the results of the trials that have been completed in Kozan, Adana, at the Selcuk Akin Orchard.

Using

- * Alogenic Renew A Bio Soil Improver
- * Alogenic Renew B Raw Liquid Material
- * Alogenic Renew B Wholeleaf Powder

Initially using Alogenic Bio Soil Improver Fertiliser with Wholeleaf Soil Booster Powder, the root areas of the trees were sprayed by hand,
The spraying was completed 6 times over a period of about 8 weeks for a trial

2nd Treatment using Wholeleaf Powder

- * Alogenic Raw Material and Whole leaf Soil Booster Powder, foliar spraying was completed using the large power spraying equipment as shown in the pictures below.

The trial carried by Mr Selcuk was very promising, he noticed a number of improvements:

- * There were noticeably less insects on and around the treated trees eg. ants, spiders and Birds etc
- * There was a significant difference in the colour of the soil, a deeper more healthy looking colour. A significant deeper green colour in the foliage and fruit.
- * A storm occurred during the trial, heavy winds caused a lot of damage, Mr Selcuk told us that the sample trees weathered the storm much better and retained much more fruit and foliage.
- * Mr Selcuk was very pleased with the results and is keen to adopt the products on an ongoing basis as soon as we can get product to him.

Kind Regards

Selcuk and Ahmet, Adina, Turkey.
