

SOLAR PANEL KIT

Ideal for maintaining infrequently used batteries where 240V power is not easily accessible.

Automatic Solar Charge Controllers

Controls the power going into your battery from your solar panels. Will protect your battery from solar overcharging. Overcharging occurs when the charge going into your battery is unregulated. The solar controller has a built in regulator to prevent batteries from overcharging.

Superior Solar Charging

Made using ultra thin film technology, this panel will absorb a wider spectrum of daylight allowing it to work under cloudy conditions.

Tough Construction

The double glass structure reinforced its strength enabling it to withstand hailstones of up to 25mm in diameter.

Discharge Protection

Includes a Smart Control unit to prevent solar discharge at night

Maintains Your Battery

Can be used on larger batteries to prevent power drain caused by radio memories, clocks, alarms and onboard computers.

Extend Your Running Time

Use the solar panel to extend the running time of your battery. Connect the panel to the battery and use the battery as normal to power you appliances.
