

BROW TRICKS

RemoveMe Application Directions:

- ❖ Shake bottle of RemoveMe and pour into a single-use pigment cup.
- ❖ Pre-cleanse skin with isopropyl alcohol or green soap.
- ❖ Once the first pass has been completed with the chosen needle configuration, an additional anesthetic that does not contain epinephrine may be used. DO NOT use any anesthetic that contains epinephrine.
- ❖ Layer the RemoveME on top of skin to assist with penetration. Dip the needle configuration into the RemoveMe fluid solution and open the skin in a circular/oval, pointillism, or tapping movements. Utilize the movement technique and needle configuration best suited for the removal area. Only make the number of passes required to open the skin to effectively implant RemoveMe. Depth and pressure should be the same as if you were depositing pigment.
- ❖ After passes are complete use a micro-brush to directly apply RemoveMe to the tattooed area for additional lifting power. Leave RemoveME on the skin for 2-3 minutes and repeat steps up to four times if needed. DO NOT have RemoveME on the skin in TOTAL for more than 10 minutes MAX.
- ❖ After gently wiping off the solution, cleanse with non-alcohol witch hazel and discuss after care with client. Schedule 8 weeks out for next removal visit.

Emergency Directions

- ❖ Emergency removal can be done within 48hrs of clients session
- ❖ Shake bottle of RemoveMe and pour into a single-use pigment cup.
- ❖ Apply a WARM compress to the newly tattooed area. Leave compress for 10 minutes to loosen up any scabbing.
- ❖ Blot area dry before applying any RemoveMe fluid
- ❖ Apply RemoveMe with micro-brush and saturate area. Apply with a microbrush in circles, up and down, and side to side. You may repeat this step one more time for additional lifting power. RemoveME can be on the skin for 10 minutes maximum TOTAL.
- ❖ Gently blot off solution until area is dry. Discuss after care with client and schedule 8 weeks out for follow-up/next removal visit
- ❖ For SPOT emergency removal, only apply RemoveME onto the desired areas with the microtip.

Directions for CERTIFIED Removal Specialists **Professional Use Only**

Remove **ME** *Aftercare Instructions*

Saline Removal Aftercare

- Cleanse the brows with sterile saline solution and cotton rounds 3x daily for 7 days. Continue if still scabbing.
- DO NOT touch, put on any products/makeup, or pick your brows. Scabs must shed naturally.
- Avoid long showers and getting your brows wet.
- AFTER all scabs are gone, apply BrightenME serum until day 30. It will continue to lighten the pigment, as well as hydrate the skin and help repair any scar tissue.

It is critical to follow all aftercare instructions to prevent complications, scarring and to achieve optimum results. Please read carefully.

- ❖ **KEEP AREA CLEAN** and open to the air. Do not cover with a Band-Aid or anything else, leave open to air. Air/oxygen provides good and faster healing. You should not be touching the area at all but if you find yourself needing to please make sure your hands are exceptionally clean.
- ❖ **CLEAN BY BLOTTING AREA** with saline 3 to 4 times a day using a paper towel or gauze. NO ICE.
 - This Saline can be purchased in the EYE section or WOUND CARE section of any drug store or Walmart. Look for "Sterile Saline" on the bottle. Clients can purchase this themselves.
- ❖ **DO NOT SOAK** the treated area in water. You can shower as normal but keep the area out of the shower spray the best you can and do not let the area stay wet for more than a few minutes. It is best to keep it dry but if you do get it wet gently pat dry. Blot with saline immediately following a shower.
- ❖ **NO BATHING, SWIMMING, SAUNAS, HOT TUBS, OR TANNING. NO EXCEPTIONS.**
- ❖ **DO NOT** disrupt the scabbing process (i.e., no picking, scratching, etc.) All scabbing needs to fall off naturally. If you force or pick a scab off, you will disrupt the process and possibly

BROW TRICKS

cause scarring. It is critical to keep the scabs on as long as possible to achieve optimum results.

- ❖ **TREAT AREA WITH TLC. DO NOT DO ANYTHING AT ALL THAT COULD CAUSE ISSUES OR PROBLEMS TO THE TREATED AREA.**
- ❖ **ONCE ALL SCABBING HAS NATURALLY FALLEN OFF**, you can apply our Vitamin C aftercare serum, BrightenME to rejuvenate and heal the skin.
- ❖ It is important to the process and integrity of the skin has 8 full weeks of healing take place before another lightening session can be done. No exceptions.
- ❖ Lightening and/or removing unwanted pigment is a long process and patience is required. This is true whether you are choosing a lightening product service or laser. Please be patient and give the process a fair chance to work. Expect visible and wanted results in 2 to 5 sessions. How many sessions needed will depend on how saturated the pigment is, how deep it was implanted and how much needs to be removed for the desired result.
- ❖ In many cases only a percentage of the pigment needs to be lightened/removed and then we can continue by color correcting or color shifting. In those cases where we have pigment misplaced or in an unwanted area, color correcting will not be an option and removing as much of the pigment as possible is our goal.
- ❖ Results cannot be foreseen, predicted, or guaranteed.
- ❖ If you have any questions or concerns, please call us. If at any time you have any green or yellow puss in the removal area, these are signs of infection, and you should see a medical practitioner.
