## APPLICATION

# Step by Step.

### PREPARATION.

---

- 01 | File your nails into the desired shape and gently push back your cuticles.
- 02 | For optimal adhesion, gently roughen the nail surface with a buffer or the fine side of the file.
- 03 | To prevent lifting, remove the invisible cuticles and skin residue at the base of the nail.
- 04 | Do not apply any oils or creams before use. Also, refrain from washing your hands for at least one hour before application.
- 05 | For optimal durability, we recommend degreasing the nails with Doonails Primer before application.
- 06 | For the next steps, we advise you to wipe the brush of the Base Coat on a paper towel after each brush stroke to avoid soiling the brush.

### STEP 01

---

#### **BASE COAT & BASE POWDER.**

Apply a thin layer of Base Coat to your nail with 3-4 brush strokes. Then immediately gently dip your nail into the base powder at a 45-degree angle and tap off the excess powder. Carefully remove the powder residue from the nail surface with the black brush.

**Repeat this process nail by nail.**

## STEP 02

---

### **BASE COAT & COLOUR POWDER.**

Apply another thin layer of Base Coat. Then immediately dip the nail into the colour powder at a 45-degree angle and lightly brush off the excess powder. Here, too, it is important to work your way through nail by nail.

Repeat STEP 02 for optimal coverage, durability and colour intensity.

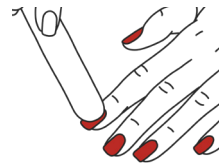

## STEP 03

---

### **ACTIVATOR COAT.**

Apply enough Activator Coat to the entire nail surface, the edges and the tip of the nail and leave to dry for at least two minutes.

## STEP 04

---

### **FILING.**

Now you can use the fine side of the file or a buffer to smooth out any unevenness. It is important to file carefully and with little pressure so as not to damage the surface and injure your nails.

## STEP 05

---

### **ACTIVATOR COAT.**

Again, apply enough Activator Coat to the entire nail surface, the edges and the tip of the nail and leave it to dry for at least two minutes.

Make sure to wait as indicated between applying the Activator Coat and Top Coat.

## STEP 06

---

### **TOP COAT.**

Apply a thin layer of Top Coat evenly with 2-3 quick brush strokes and leave to dry for at least two minutes.

## STEP 07

---

### **TOP COAT.**

Apply a second, thin layer of Top Coat precisely with 2-3 brush strokes. After approx. two minutes, the Top Coat will be completely dry, and your manicure is done.

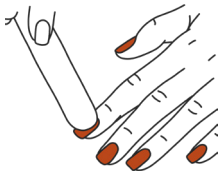

Finally, use Doonails Nail & Cuticle Oil to care for your cuticles.

## *Tips for you and your manicure.*

- 01 | Always apply the Base Coat thinly and immediately dip into the powder - nail by nail.
- 02 | The Activator Coat is the most important step in the application process and hardens the individual layers of powder. The second layer of Activator Coat allows the Top Coat to dry in minutes.
- 03 | Be careful not to paint your cuticles, as this can lead to lifting and chipping.
- 04 | Carry out the application under good lighting (no UV light) to achieve a perfect result.
- 05 | After each application, thoroughly clean the neck of the liquid bottle with a paper towel to prevent the lid from sticking.
- 06 | Store the products at room temperature and protect them from heat and direct sunlight.

## REMOVAL

### *Step by Step.*

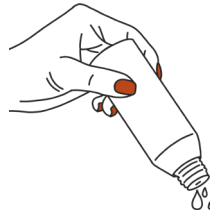

#### STEP 01

---

##### **FILE OFF THE TOP COAT.**

File off the Top Coat with the coarse side of the file. The more dipping powder you file off, the quicker your manicure will be able to be removed.

#### STEP 02

---

##### **PREPARE THE REMOVER BOWL.**

Fill the base of the remover bowl half-way with very warm water and close it with the transparent lid. Place a cotton ball in each notch of the lid and soak it in the Doonails remover liquid.

#### STEP 03

---

##### **RUB THE NAILS ON THE COTTON BALLS.**

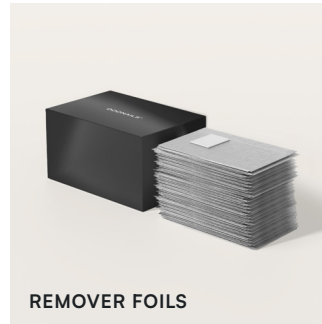

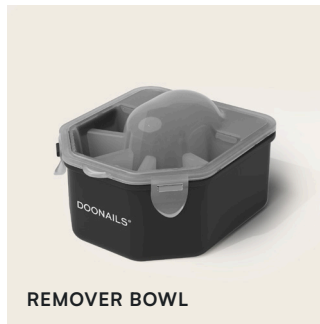

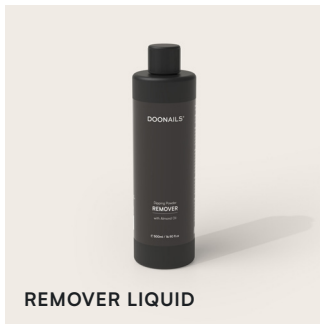

Gently rub the nails against the damp cotton balls for approx. 10 minutes until the dipping layers come off. Carefully remove the last remnants with the manicure stick and a buffer.

# Tips & Guidelines *for Removal.*

- 01 | The Doonails remover liquid reacts with heat. That's why the dipping manicure can be removed in minutes with our remover bowl. We got the inspiration for this removal method from our community.
- 02 | For pedicure removal, we recommend using the Doonails remover foils.

## Our *remover products* at a glance.

# How do I use my *Brush Cleaner and Softener?*

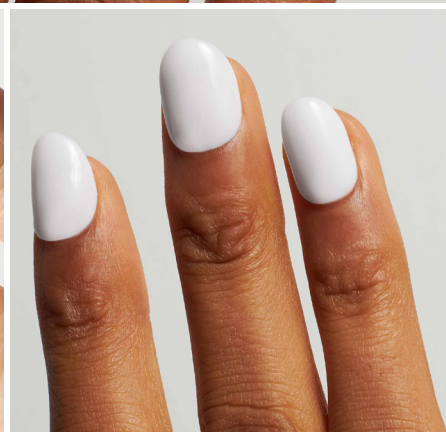

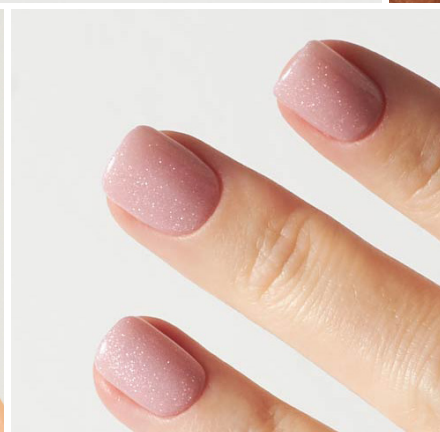

The Brush Cleaner & Softener cleans and removes unwanted discolouration or residue from the liquid brushes and prevents them from hardening.

Simply replace the dirty or sticky brush with the Brush Cleaner & Softener and leave it to soak in the Brush Cleaner & Softener liquid.

Before you swap the brushes for the different liquids, it is important to dry them with a cloth so that the different liquids do not mix.
