

CMRP-1002190

The DFuser Kill Switch Kit is the ultimate race car power switch relay package.

- Toggle switch can be easily mounted anywhere
- Solenoid designed to be mounted near battery, reducing amount of expensive heavy gauge wiring running thru vehicle
- Provides clean switchable power lead for accessories
- Additional switch can be mounted in series to meet some sanctioning body requirements
- If you need an additional kill switch on the cowl or back of the car for external access to meet your sanctioning body's requirements, we recommend pairing this product with the Longacre Weatherproof Battery Disconnect (4-Terminal).

What's in the Kit:

- BR 100 amp continuous/300 amp surge relay
- Cut-off 25 AMP Switch DPST (Cuts power to relay and ignition at the same time)
- Battery terminals
- Battery Cable
- Wire Connectors

INSTALLATION DIAGRAM:

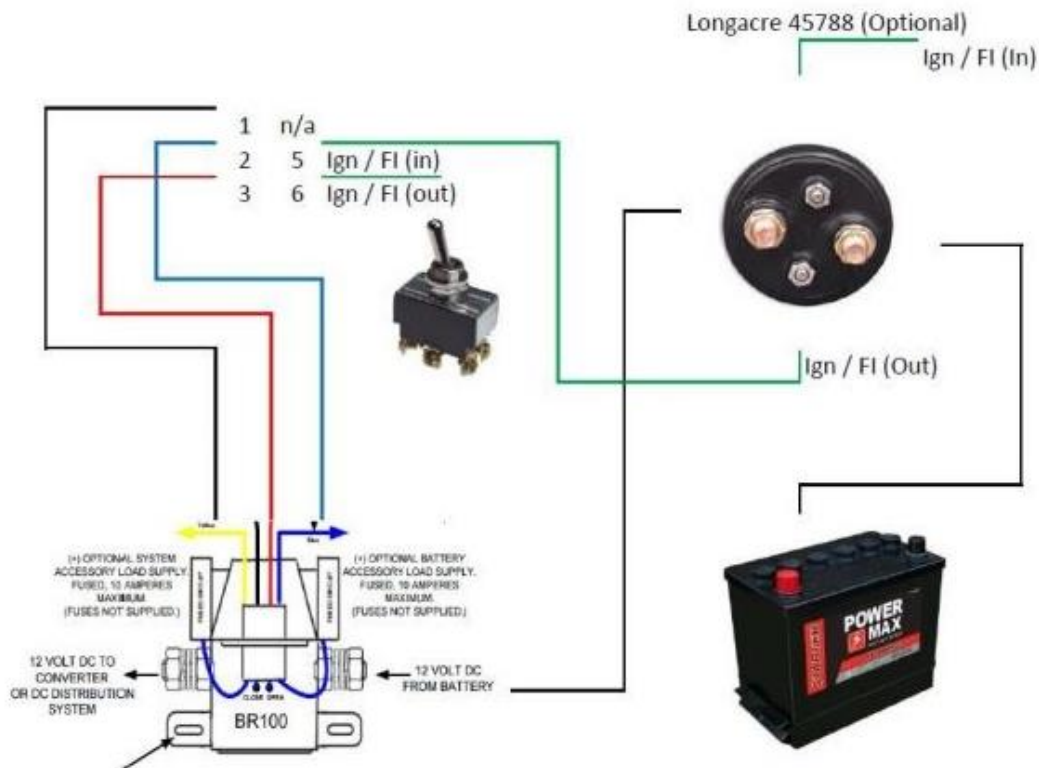

Diagram shows how to connect this system into any race car.

The Longacre switch is only used for those that need an external switch on the cowl or back of the car for external access.

Note: Blue and Yellow wires on some of the BR-100 may be reversed from the manufacturer.
