

SHOULD I GET THE FLU SHOT?

People ask “Do you believe in the flu shot” as if we were discussing dragons or the tooth fairy. Yes, we do. We defer to the experts- the CDC and the Immunization Action Coalition.

If you think vaccines are something to "believe in," you are looking at it all wrong.

SHOULD I GET A FLU SHOT?

Yes. Without hesitation. The flu shot's duty is to prevent death and hospitalization. Get it to protect the people who are high risk, even if you are not. The flu ends with you

TAKE FLU SERIOUSLY

It's not about getting sick for a week. Vaccines are used to prevent serious complications like DEATH in vulnerable groups. Not vaccinating is like playing Russian roulette

FLU SHOTS CAUSE AUTISM?

No. ONE doctor ran a fake study showing a connection between vaccines and autism- but he was a FRAUD. There is conclusive data that there is no way vaccines cause disease

IT WON'T MAKE YOU SICK

Everything in a vaccine is gone in 72 hours. Why do some people get sick after a vaccine? Because flu shots are given in public places where sick people are. It's only a coincidence

BUILD THE IMMUNE SYSTEM?

An absurd macho notion says it's better to get exposed to the flu and fight it. Wouldn't it be cool if we could get our immune system to be stronger without getting sick? THAT'S A VACCINE.

When you strip away the myths surrounding flu vaccine, there is literally no good reason not to get it done. Vaccinate your family. Do it early. Do it every year. Spread this message. Make the flu end with you.
