

BABY LOCK SEWING ACCESSORIES

Roller Foot

(ESG-RF)

Instructions

The Baby Lock Roller Foot is used to help feed slippery fabrics such as silk, leather, velvet, vinyl and elastic. The textured rollers provide more control of the fabric by keeping the fabric tightly pressed against the feed dogs. The rollers move the foot freely across the fabric allowing it to ride over various thicknesses.

The Baby Lock Roller Foot is most commonly used with a straight stitch or a zigzag stitch. Decorative stitches can be used as long as you narrow the stitches and check your needle clearance before you begin stitching. Check the pressure of the presser foot when using either very thin or very heavy fabrics.

Note: This foot will fit BLQP if master bracket (BLQP-MB) is used.
