

BABY LOCK SEWING ACCESSORIES

Invisible Zipper Foot

(ESG-IZF)

Instructions

Zipper applications can be the telling sign that a garment is ready-made or homemade. Therefore, proper insertion of your zipper is essential to the professional appearance of your garment.

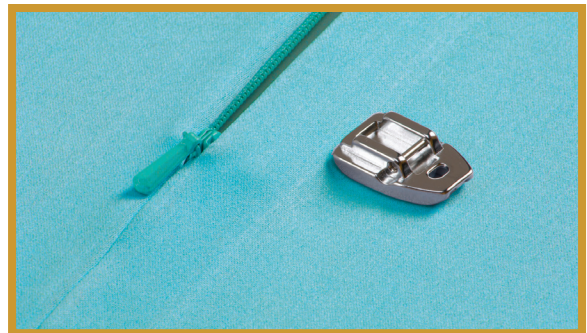

Invisible zippers are used when you do not want outside stitching lines to show, such as in a regular zipper application. Use your Baby Lock Invisible Zipper Foot for easy, no-fail zipper insertion.

MACHINE SETTINGS

Stitch:	Straight stitch
Needle position:	Center
Stitch width:	Pre-set

INSTRUCTIONS FOR INVISIBLE ZIPPER FOOT:

1. There are two grooves on the underside of the foot that guide the coil of the zipper as you stitch.
2. The invisible zipper is inserted in an open unsewn seam.
3. Open the zipper and place the right side of the zipper to the right side of the fabric, placing the coil of the zipper on the seam line.
4. To sew the right side of the zipper: Raise the coil and position the coil in the right groove so the center needle position will sew to the left of the coil.
5. To sew the left side of the zipper: Raise the coil and position the coil in the left groove so the center needle position will sew to the right of the coil.
6. Stitch from the top of the zipper tape to the zipper pull on both sides.

7. Close the zipper.
8. Finish the seam under the zipper by moving the bottom of the zipper out of the way and match the fabric edges. Stitch the seam.

FOR THE LOVE OF SEWING
