Left Foot

verbero

Instructions

Print out this form and make sure the squares on the corner are the size indicated. This guarantees your form has been printed properly and your measurement will be accurate. Fold the bottom right corner of the paper along the red dotted line. On a flat surface, place your foot against the folded corner so it sits diagonally on the page, as seen in the example. Trace with the pen in a 90° angle to the paper. Repeat the process for both the left and right foot. Use the suggested size for a close fitting skate. If your feet are wide, or if you prefer a looser fit, you should choose a size up.
