Web Developer

Our Team

Mighty Jaxx is a unique future culture company that creates quality products across multiple categories such as art collectibles and lifestyle items, bridging the physical & digital world by powering it with technology. Since our inception in 2012, we have produced over 1,000 designs in collaboration with world-renowned artists and global entertainment brands like Hasbro, Sesame Workshop, Toei Animation and Warner Bros, delivering 5 million units of tech enabled collectibles to collectors in over 60 countries in 2020 alone.

We are proud to be an equal opportunity employer with a diverse, inclusive work environment and encourage our employees to bring their true fun-loving and high-energy selves to the workplace. With big, vibrant dreams and a culture of high performance in our workplace, you will always be engaged, empowered and feel positively challenged.

At Mighty Jaxx, we always extend our full support to the team to help them reach their full potential personally and professionally. If you love keeping up with the latest trends across different sub-cultures, love technology and are ready to embrace your creativity, we love to have you join us in creating the most unique experiences, products and content for our collectors!

The Job

We are looking for a passionate Web Developer who will be working alongside our Product Managers and Designers to build scalable and high performance software platforms and web applications. If you are enthusiastic about the craft and are constantly seeking better ways to solve tough problems, this is the position for you!

Responsibilities

- Deliver features and fixes within the sprints according to the needs of the product line within deadlines
- Work with Product Managers and Designers to build features with performance, reliability, and security in mind
- Maintain code quality through intentional architecture, documentation and code review
- Contribute actively to technical and product discussions
- Build and deploy performant modern mobile and web applications in React, Redux, ES6+
- Architect and build efficient and scalable backend systems using Node and Express

- Write high-quality code that communicates with upstream backend services via HTTP APIs
- Identify and resolve performance and scalability issues
- Participate in code reviews
- Utilize design, coding patterns, tools and frameworks and methods to meet the team sprint objectives and the overall quarterly team objectives
- Design and implement RESTful APIs

Requirements

- BSc Degree in Computer Science or related field
- At least 2 years of working experience in web development
- Experience with React, Redux
- Experience in designing and developing back-end services using NodeJS, GraphQL, supporting front-end stakeholders
- Comfortable with noSQL (MongoDB) databases and Github
- Proven architecture expertise at a multi-system level, writing scalable, efficient and clean code
- Experience in shipping web applications to production
- Good understanding of whole web stack, web protocols and web performance optimisation techniques
- Good understanding of the HTTP protocol
- Enjoy working in an Agile development environment and take initiative to improve systems
- Able to grasp complex concepts and communicate well
- Able to work independently and collaboratively in a team environment

Nice-to-haves

- Experience building mobile applications with React Native
- Experience with AWS
- Knowledge of Shopify web development and liquid templates
