

## **Team**

Based in Singapore, Mighty Jaxx is an award winning design studio specializing in developing art collectibles. Since our inception in 2012, we have produced over a thousand designs and delivered hundreds of thousands of products to collectors all around the world. Our limited edition collectibles are designed in collaboration with world renowned artists worldwide.

We also worked with international brands such as DC Comics, Cartoon Network, MTV, New Balance and more, to develop unique projects and worlds that our creations live in. See you in our many universes!

Our technology team is made up of fast-paced, creative and fun-loving individuals with a goal to empower and engage every collector and artist around the world. This is core to everything we do and we pride ourselves in always taking an innovative, data-centric yet considerate approach in creating the right experiences, products and content for our collectors. With big dreams and a grand mission, we're looking for great like-minded people to join us.

If you're looking for an opportunity to learn, grow, and really make an impact, this is perfect for you!

## **The role**

You will be hands-on with empowering collectors across the globe through design and technology. You will have the opportunity to work across both online and offline products to create delightful and meaningful experiences for collectors around the world. You are responsible for building the next-generation web and native applications for our collectibles platform and other products in our ecosystem.

## **Main Responsibilities**

- Implement new user-facing features in Mighty Jaxx's products, which have a huge amount of present value everyday
- Build fast and easy-to-use experiences for web and native apps with React and React Native for devices of all sizes
- Optimize apps to maximize speed and scale
- Build libraries and frameworks that support complex web applications, speed development efficiency up and improve code quality
- Learn new trends and implement them within Mighty Jaxx's ecosystem
- Be a leader and mentor challenge, grow and mentor designers and foster a strong spirit of collaboration and excellence
- Participating in key internal meetings including weekly status updates and planning sessions

## **You should**

- Have a passion for building beautiful interfaces and user experiences that spark joy
- Not just write JavaScript, but understand how a whole web app works

- Be able to communicate tiny pieces of code we can understand at a glance
- Know TypeScript
- Know Next.js
- Know React Native
- Know styled-components
- Have some understanding or experience working on native iOS/Android projects or features
- Have an entrepreneurial spirit with a self starter attitude and ability to get your hands dirty
- Have the confidence to question and stress-test decisions made within the team

### **Requirements**

- 2 - 3 years in web and mobile app development (e-commerce is definitely a plus)
- Worked 2-3 years writing TypeScript/JavaScript code, and a strong knowledge of React and/or React Native. A good grasp on state-management patterns such as Redux, Flux, etc
- Fluent in responsive design, native mobile/tablet design
- Expertise in HTML5, CSS3 and JavaScript
- Degree in computer science or other relevant fields
- Excellent communication skills to provide a clear rationale for implementation concepts and how they align to project goal
