Limited Lifetime Warranty

SunDome™ warrants your tanning unit to be free of structural defects in its material and workmanship, under normal use, for its lifetime. SunDome will repair or replace, at their discretion, any defect to the structure which affects the performance of the unit.

For 6 months from the date of purchase, SunDome will provide replacements for parts that prove to be defective in material or workmanship. Acrylic shields, fluorescent lamps, and lamp starters are excluded from this warranty. Labor will be covered for 30 days from purchase date. Normal wear, damage from misuse or abuse, damage incurred in transit, or damage done by unauthorized repairs or modifications are not covered by this warranty.

ETS, Inc. disclaims any implied warranty of merchantability or fitness for any period beyond the expressed warranty. Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.

No one has authority to change or modify this Limited Lifetime Warranty in any respect. To obtain service under the Limited Lifetime Warranty, contact ETS, Inc. at 1-800-449-3605, and ask for the Technical Service Department.

ETS, Inc. shall not be liable for loss of use, loss of time, inconvenience, rental or substitute products, loss of business, loss of income, or any other incidental or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state.

All warranty service must be performed by an authorized service person. If your tanning unit must be returned for service, all freight charges must be at your expense. Contact your place of purchase for the address of the SunDome Service Center nearest you. Proof of purchase is required to obtain warranty service.

This warranty covers the original purchaser only. This warranty is void if the unit is modified in any manner from its original design.
Welcome

Congratulations on your purchase of this technologically advanced sun tanning unit. It has been designed to provide years of dependable service for you.

Please read all the instructions in this booklet before installing and using the unit. Always be sure to observe all safety precautions.

Safety Information

LABELING NOTICE: Labels are affixed on all systems to inform the user of possible dangers. Regulations are stated in 21 CFR 1040.20, and require that all products manufactured after September 8, 1986 which use sunlamps must display the following:

DANGER: Ultraviolet radiation. Follow instructions. Avoid overexposure. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Repeated exposure may cause premature aging of the skin and skin cancer. WEAR PROTECTIVE EYEWEAR; FAILURE TO MAY RESULT IN SEVERE BURNS OR LONGTERM INJURY TO THE EYES. Medications or cosmetics may increase your sensitivity to the ultraviolet radiation. Consult physician before using sunlamp if you are using medications or have a history of skin problems or believe yourself especially sensitive to sunlight. If you do not tan in the sun, you are unlikely to tan from the use of this product.

For a uniform tan, center yourself within the booth both front and back and to the left and right. This will result in your body being equidistant from all lamps. Other positions may result in overexposure to parts of your body. Do not use without metal grids in place.

Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

New lamps emit approximately 10% more ultraviolet radiation during the first 50 hours of operation. Recommended tanning times should therefore be reduced by approximately 10% during that period.

WARNING: • Read the instructions booklet before using this sunlamp product. • All persons in the room should wear protective eyewear when lamps are on. Recommended eyewear: provided eyeshields (Lucas Products Super Sunnies) or equivalent eyewear as defined under 21 CFR 1040.20. Other types of eyewear may not provide adequate protection.

ONLY THE FOLLOWING LAMPS HAVE BEEN CERTIFIED FOR USE IN THIS EQUIPMENT:

MEGA VOLTAGETM Gold Series VS-R™ Model MV75R-T12-160W VS-R Bi-Pin
Velocity® VS-R™ Wolff® Model VEL75-T12-160W VS-R Bi-Pin

DISCONNECT POWER CORD BEFORE ATTEMPTING TO CLEAN, RELAMP, OR ENGAGE IN THE MAINTENANCE OF THIS PRODUCT.

THIS EQUIPMENT MUST BE EARTH GROUNDED.

THIS PRODUCT IS IN CONFORMITY WITH PERFORMANCE STANDARDS FOR SUN LAMP PRODUCTS UNDER 21 CFR PART 1040.20

Unpacking and Inspection

The SunDome™ comes in seven boxes. For ease of assembly, after inspection leave everything in its box until called for in the assembly instructions.

Open each box and inspect the contents and make sure they are free from any visible damage. Report the extent of any damage to the transportation company.

Note! The cartons are reusable if you need to move the unit, or in the unlikely event that you may find it necessary to return your equipment.

As you unpack your boxes you should find the following:

- Pedestal (box 1)
- Control Module (box 2)
- Bag containing necessary assembly hardware, and safety goggles (box 2)
- Left Module (box 3)
- Right Module (box 4)
- Left Door (box 5)
- Right Door (box 6)
- Dome Assembly (box 7)
- Two Long Handles
- Two Long Trim Profiles
- Timer Assembly (box 7)

Record the serial number of the control module in the area provided at the back of this manual. This information will be required if you ever need to call customer service.
Pre-Installation Planning
Before you begin to assemble your booth, you should observe the following considerations.

- **WARNING**
  - Shock hazard. Disconnect power before servicing.

- **CAUTION**
  - Use of a voltage source above 230V AC may prevent proper operation of the booth and could cause damage and void the warranty.

- **CAUTION**
  - Proper assembly of your booth requires two people. Plan to have a helper or two assist you.

- **CAUTION**
  - The SunDome™ XL48 operates from a 220V AC power source. The unit should be hardwired directly to a junction box on a dedicated circuit capable of providing 60 Amp service. We recommend connection by a professional electrician.

- **CAUTION**
  - Air from the room is used to cool the unit. Maximum ambient room temperature should be 80°F. Place your booth no closer than 6” from any wall. Make sure nothing obstructs the airflow into or out of the fan openings. A poorly ventilated room may cause the unit to become hot and cause discomfort to the user.

- **CAUTION**
  - • IMPORTANT! Voltage must be below 230V AC or may require a Buck Booster. Contact ETS service at the number on the back of this manual.
Tools Required
You will need the following tools to assemble your booth.

#2 Phillips Screwdriver

7/16” Wrench
(or adjustable wrench)
**Hardware Inventory**

Open the hardware bag and remove the hardware. Make sure you have the following items.

- Magnet
  - Strike Plate
  - Quantity - 2

- Shim Washer
  - Quantity - 4

- 1/4-20 x 3/4”
  - Hex Head Bolt
  - Quantity - 9

- 1/4” Flat Washer
  - Quantity - 9

- Joint Plate
  - Quantity - 2

- Wire Clamp
  - Quantity - 2

- Inside Door Handle
  - Quantity - 2

- Safety Goggles
  - Quantity - 1

- #10-32 x 1/2” Screw
  - Quantity - 16

- #10-32 Flange Nut
  - Quantity - 4

- #8-32 x 3/4” Screw
  - Quantity - 4

- Bronze Hinge Bushing
  - Quantity - 4

- Hinge Locking Pin
  - Quantity - 4
Assembly Procedures

Put the pedestal (found in box 1) in the general area you want the booth. Leave some space around the pedestal to work.
Parts needed:
Control Module (box 2)
Left Module (box 3)
Right Module (box 4)

Remove these two screws and lift the grill from the unit. Repeat for the other grills.

NOTE: Wiring has been deleted to show details.
Installation - Assembly Procedures

Parts needed:
Control Module
Left Module
Right Module
9 - 1/4-20 x 3/4" Hex Head Bolts
9 - 1/4" Flat Washers

NOTE: Wiring has been deleted to show details.

Attach modules to pedestal with three bolts and washers each, as shown. Attach the Control Module (center module) first, then the other two. Leave the bolts slightly loose until all are positioned, then tighten. For best results, push the left and right modules apart as much as possible. This will help when installing the doors.
Parts needed:
2 - Joint Plates
2 - Wire Clamps

NOTE: Wiring has been deleted to show details.
Parts needed:
2 - Inside Door Handles
4 - #10-32 x 1/2” Screws

1. If not already done, you will need to remove the grills from both doors.

2. Secure handles with screws through the double grid pattern on each door grill.
Parts needed:
Grills (removed earlier)
2 - Trim Profiles

Reinstall the grills.

Insert trim profiles into space between right and control module, and between left and control module.

NOTE: Wiring has been deleted to show details.
Parts needed:
Timer Assembly (box 7)
4 - #8-32 x 3/4” Screws

1. Put the cables from the timer on top of the SunDome and secure the assembly to the booth with the four screws as shown.

2. Match the cables from the timer to the cables coming up from the top of the booth and connect them.

The screw in the center of the timer’s hinges can be adjusted to increase or reduce friction.
Parts needed:
Long Handles
8 - #10-32 x 1/2” Screws
4 - #10-32 Nuts

The handles attach with two screws to the top of the right and left modules and with two screws with nuts through the double grill wire at the bottom, as shown.
Parts needed:
Left Door (box 5)
Right Door (box 6)
4 - Hinge Bushings
4 - Hinge Locking Pins

1. Insert bronze bushings into hinge holes.
2. Insert door hinge post into bronze bushing.
3. Install hinge locking pins in hole in all four hinge posts.

If a door rubs the pedestal, install a shim washer on the hinge post over the bronze bushing on both the upper and lower hinges of the affected door.

NOTE: Wiring has been deleted to show details.
Parts needed:
2 - Magnet Strike Plates
4 - #10-32 x 1/2” Screws

Install magnet strike plates with two screws each. To achieve proper positioning, close the doors and make sure magnets at the top of the doors contact the magnet strike plates.

NOTE: Wiring has been deleted to show details.
There are five cables coming out of the top of the control unit (not counting the two connected to the Timer Assembly). Two cables have a twelve pin connector (see illustration at right) and the other three have a six pin connector. Wire the booth as shown below, making sure all wiring is secured in any wire clamp it may pass.

Notice the squared pins and holes for easy connection.

Leave short 6 pin cable loose.
Parts needed:
Body Fan / Speaker Assembly (box 7)
4 - #10-32 x 1/2" screws

NOTE: Wiring has been deleted to show details.

Make sure cable connector is on this side.
The fifth cable, left loose earlier, goes to the Body Fan / Speaker Assembly. Bring the cable around the assembly leg and connect it to the 6-pin cable on the assembly. Again, secure the cable in any wire clamps it passes.
Parts needed:
Dome (box 7)
4 - #10 x 1/2” screws

Secure the dome in place with the four screws, as shown. Be sure not to pinch any wires.

NOTE: Wiring has been deleted to show details.

When installing the dome, notice the two small pins located on top of the unit (shown below). Make sure the slots in the dome flange engage the two pins when installed. You may need to squeeze the dome slightly.
Electrical Connections

At the rear of the booth is an armored power cable. Connect power cable as described in Pre-Installation Planning. Again, a professional electrician is recommended. A Remote Control Bypass plug is already installed in one of the remote control ports as shown. It may be installed in either port. Your booth will not operate without the Remote Control Bypass plug or a remote system connected. Your equipment is now ready for use.

In the dome of the SunDome™ booth are two speakers capable of handling 25W of musical power, with a maximum of 80W. Just above the power cable are two speaker inputs to connect to a stereo.

NOTE: Your unit is designed to accept an input from a remote control device. The remote control is optional. If you plan on using a remote system refer to Remote Connections.

ATTENTION: Although the Remote Control Bypass plug provided with your unit will work wherever a T-Max® terminator is called for in the series, the T-Max® terminator will not work as a bypass plug. A bypass plug is needed only when your booth is operated without a remote system connected.
Remote Connections

Your tanning booth incorporates advanced circuitry allowing it to connect and communicate with most remote control systems. If a remote system is to be used, first determine whether the remote system is a T-Max® System or a standard remote system operating with a control relay. Follow the appropriate instructions for your system type.

**T-Max® Products**

The T-Max® remote systems offer the ultimate in sunbed control, while allowing the tanner easy straightforward operation. Your booth is configured to directly connect to this system. The circuitry inside your booth eliminates the need for the T-Max® 1A or 3A when connecting to the T-Max® Manager series. Your booth supports the auto addressing feature of the latest T-Max® Manager models and the following parameters: 2, 5, 6, 7, 8, 9, 10, 14, and 15. See your T-Max® manual for descriptions of these parameters and how they function.

**T-Max® Manager Remote System**

This system is ideal for multiple sunbed installations. Simply connect the RJ-22 modular cable(s), described in the T-Max® Manager manual, into the remote port(s) located on the back of your booth and follow the instructions that came with your remote system, noting figure 1. If you have an older T-Max® Manager that doesn't support auto addressing, set the address, or “id”, of each unit manually as described in Setting the address manually. You can place your booth at any location in the series.

NOTE: A T-Max® 1A can be substituted for the 3A in figure 1.

---

**CAUTION**

The remote connection is not designed to supply or accept high voltage, nor can it provide power to an external timer. The booth's remote interface circuitry operates on 5 volts, attempting to connect it to any higher voltages will damage the unit as well as void your warranty.
T-Max® 1A and 3A Remote Systems

The T-Max® 1A and 3A offer the same control as the T-Max® Manager in single unit installations. If you're using a 1A, it must have a chip labelled “master” installed on its circuit board. The remote control bypass plug must not be used in this configuration.

After you have set the T-Max® 1A’s, or 3A’s, address to “0” (refer to your T-Max® user’s guide) and the booth’s address to “1” (see right), simply connect the RJ-22 modular cables, described in the T-Max® user’s guide, directly into either port located on the back of the unit and either port on the back of the T-Max® 1A or 3A. See figure 2.

Setting the address manually

Before connecting your booth to the T-Max® Manager or T-Max® 1A or 3A, the address of your booth must first be set. Set the “id” manually as described below.

Setting the Address

1. Make sure the sunbed display is showing “0”.
2. Press the red stop button and, without releasing it, press the green timer button and hold both for three seconds. The display should indicate an address number from “1” to “255”.
3. If you are using a T-Max® 1A or 3A as your remote, the address of the sunbed must be set to “1”. If you are using a T-Max® Manager each sunbed must be assigned a different address. To adjust the address, press the green timer button to count up until the desired number (from 1 to 128) is achieved. Addresses 252 to 255 are not normally used.
4. Press the red stop button to return to the normal display mode.

NOTE: A T-Max® 1A with a “master” chip can be substituted for a 3A in figure 2.
Remote systems using a Control Relay

Most non-T-Max® remote systems control the unit by the use of a relay. The relay operates the unit by connecting and disconnecting a pair of wires leading from the unit. Refer to the user’s manual provided with your remote system to determine if it operates in this way. To connect your booth to this type of system a remote interface kit is required. Call ETS at the phone number listed on the back of this guide to obtain the kit. *Figure 3* details a typical connection. Follow the instructions provided with the kit and from the remote’s manual to make the necessary connections.

**CAUTION**
The remote connection is not designed to supply or accept high voltage, nor can it provide power to an external timer. The booth’s remote interface circuitry operates on 5 volts, attempting to connect it to any higher voltages will damage the unit as well as void your warranty.

*figure 3*
Before You Tan

Before using your tanning booth, please note the following important precautions.

- Your skin should be free of cosmetics, tanning oils, or other body lotions prior to tanning except for those specifically made for use with tanning devices. However, do not remove natural body oils by bathing or showering immediately before tanning.

Exposure Times

Follow the guidelines for skin type and exposure times as shown in the table below. Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

DANGER

Some medication may increase your sensitivity to ultraviolet light. It is recommended that you consult a physician before using this sunbed if taking any medication or if you suspect that your skin might be especially sensitive to sunlight. Included with this manual is an FDA booklet on medications that increase sensitivity to light.

DANGER

Shock hazard. Do not operate this device near water or while you are wet.
Using Your Booth

When connected to the T-Max® Manager or T-Max® 1A or 3A.

1. Open the doors, step inside and close the doors fully. For best results, position your body in the center of the booth.
2. Put on your safety goggles.
3. Assuming the remote system has been set to allow a pre-tanning delay time, the timer display (A) will repeatedly flash the delay symbol “dL” and then the remaining delay time. Press the timer button (B) or wait until the delay time has expired to begin the tanning session. The lamps will turn on and the timer will begin to count down.
4. If a tanning time less than the displayed time is desired, repeatedly press the timer button (B) to decrease the remaining time.
5. When the timer reaches 0 the lamps turn off. If you want to stop your session before time expires, press the stop button (C).
6. Exit the booth. If you become disoriented there are “EXIT” signs over the doors. The cooling fans run for a period of time after the lamps shut off to aid in cooling the booth. The timer will indicate “..” as a reminder to clean the tanning surfaces. After the booth is cleaned, press the timer button and the display will return to “0”.

**WARNING**

Wear protective eyewear. Failure to may result in severe burns or longterm injury to the eyes.
Using Your Booth
When used as a stand alone unit or when connected to a remote system using a control relay.

1. Open the doors, step inside and close the doors fully. For best results, position your body in the center of the booth.
2. Put on your safety goggles.
3. Press the timer button (B) to begin the tanning session. The lamps will turn on and the timer will begin to count down.
4. If a tanning time less than the displayed time is desired, repeatedly press the timer button (B) to decrease the remaining time.
5. When the timer reaches 0 the lamps turn off. If you want to stop your session before time expires, press the stop button (C). You will have ten seconds to restart with the remaining time, otherwise the timer will reset to 0.
6. Exit the booth. If you become disoriented there are “EXIT” signs over the doors. The cooling fans run for a period of time after the lamps shut off to aid in cooling the booth.

A Timer display - Displays remaining time.
B Timer button - Turns unit on. Timer display shows remaining time. If a lesser time is desired, press timer button until desired time is displayed.
C Stop button - Interrupts tanning session.

WARNING
Wear protective eyewear. Failure to may result in severe burns or longterm injury to the eyes.
Cleaning After Use

Clean and disinfect your tanning booth's grills, handles and pedestal after each use. Use a non-abrasive disinfectant cleaner. Wipe the grills with a soft cloth dampened with disinfectant and wipe dry with a clean soft cloth. We recommend SunQuest® disinfectant and SunQuest® acrylic cleaner.

Thorough Periodic Cleaning

Introduction

The cooling fans draw air through the unit and over time will cause a dust buildup on the lamps and reflectors. This will reduce the tanning effectiveness of the booth. When a dust buildup is observed, it is necessary to thoroughly clean the inside of the unit.

Cleaning the SunDome™

Step 1  Remove the metal grills and lamps as described in Lamp and Grill Maintenance.
Step 2  With a soft cloth, wipe the entire length of each lamp to remove any film buildup.
Step 3  Thoroughly clean grills with a disinfectant cleaner.
Step 4  Wipe the reflectors with a clean damp cloth.
Step 5  Re-install the lamps and grills.

Mechanical Inspection

Your tanning booth has been built for years of service. To ensure trouble-free operation throughout its life, inspect the unit's mechanical integrity every 400-500 hours of use.

• Inspect the unit’s fasteners verifying that all are firmly in place.
• Inspect door hinges for signs of wear. If your hinges squeak you need only replace the bronze bushings. See Troubleshooting.
• Inspect the AC power cord and its connections.

WARNING
Shock hazard. Disconnect power before removing any protective covers.
Lamp and Grill Maintenance

Introduction
To be assured of maximum tanning effectiveness, change lamps after approximately 800-1000 hours of use. Tanning will continue after this time but at a slower rate. To ensure trouble-free operation of your booth, replace the lamp starters whenever the lamps are replaced.

Removing/Replacing Metal Grills
The metal grills are secured in place by two screws at the top of each grill. Simply remove these screws and lift the grill out of its channel at the bottom. Repeat for the other grills. The long inside handles will also need to be removed to remove the left and right module grills. The lamps are now exposed.

After changing the lamps, replace the metal grills by reversing the directions.

Removing/Replacing Lamps
After removing the metal grills, replace lamps as follows.

Step 1 Grasp the lamp at one end and at the middle and turn the lamp one quarter turn. Gently remove the lamp from its holders.

Step 2 Reinstall the lamp by inserting the pins located on the ends of the lamp into the slots on top of the lamp holders and turn the lamp a quarter turn. It should click in place.

Recommended Replacement Lamps
We recommend using the lamps specified below. Use of uncertified lamps is a violation of Federal regulations and will void your warranty. These lamps have an average life of 800-1000 hours of effective tanning use. Lamps used longer than that begin to lose their effectiveness even though they continue to light.

ONLY THE FOLLOWING LAMPS HAVE BEEN CERTIFIED FOR USE IN THIS EQUIPMENT:

- MEGA VOLTAGE™ GOLD SERIES VS-R™ Model MV75R-T12-160W VS-R Bi-Pin
- Velocity® VS-R™ Wolff® Model VEL75-T12-160W VS-R Bi-Pin
## Troubleshooting

</table>
| Unit not tanning                                                       | 1. Clean unit, see *Thorough Periodic Cleaning*.  
2. Ensure supply voltage is between 208 and 230V AC.  
3. Replace lamps if lamp hours are greater than 800hrs.                                                                 |
| Lamps fail to light and timer display is blank                         | 1. Make sure the unit is connected to a power source.  
2. Check source of AC power. Reset circuit breaker or replace fuse.                                                       |
| Timer display changes to indicate a tanning time after the timer button is pressed but lamps do not come on | 1. Bypass plug is not installed, see *Electrical Connections*.  
2. A non-SunStar® bypass has been used. See *Electrical Connections*.  
3. If remote is being used, other than T-Max® Manager, the external timer may not be activated.  
4. Remote wiring is incorrect, see the instructions provided with the remote interface kit. |
| My booth is connected to the T-Max® Manager remote system and when the delay time has expired the timer display starts counting down but the tanning lights do not come on | The auto start feature of the remote system is disabled, see the instructions provided with your remote system. |
| My unit won’t work with the T-Max® Manager remote system               | 1. The unit must first be set to a unique address, see *Remote Connections*.  
2. The bypass or terminator plug may be installed in the series in an inappropriate location. Remove the bypass plug when using T-Max® products. |
| Timer display continues to show a 0 after the timer button is pressed  | 1. T-Max® Manager remote system has not yet been set.  
2. Unit address is not set correctly, see *Remote Connections*.                                                                 |
<p>| The last minute of tanning time does not count down from 59 seconds, but some time less than 59 seconds | If the timer button has been pressed to decrease tanning time during the session, the time expired in the current minute is subtracted from the last minute. |</p>
<table>
<thead>
<tr>
<th><strong>Problem</strong></th>
<th><strong>Solution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>My unit is connected to a T-Max® remote system but I am having trouble getting into “id” mode</td>
<td>You have probably attempted to connect your booth to the remote system already. Disconnect the remote plug(s) from the ports at the back of the booth, wait 90 seconds and try again.</td>
</tr>
</tbody>
</table>
| My unit, connected to a T-Max® Manager, did not display “dl” but does indicate: “0” | 1. Remote device has not been set.  
2. The unit has not been connected to the remote system, see Remote Connections. |
| a tanning time and the lamps have come on | 1. Delay time of T-Max® Manager has not been set.  
2. Delay time has expired and session has begun.  
Auto start function of T-Max® Manager has been turned off. Press the timer button to turn on lamps. |
| a tanning time but the lamps have not come on | 1. Delay time of T-Max® Manager has not been set.  
2. Delay time has expired and session has begun.  
Auto start function of T-Max® Manager has been turned off. Press the timer button to turn on lamps. |
| When auto-addressing the first bed does not register an “id” | When using the auto address feature of the T-Max® Manager you must wait 10 seconds from the time you start the auto address function before addressing the first bed. |
| When using a T-Max® 1A my unit won’t function properly | SunStar® Bypass plugs or terminator plugs may be needed if the T-Max® 1A and the unit are over 100 feet apart. Install the plugs in the open remote port in the unit and the T-Max® 1A. |
| I forgot what address, or “id”, I set my booth to | By pressing the stop button and then the timer button, and holding both for 3 seconds, the timer display will show the sunbed’s address number. Press the stop button to exit address mode. |
| My salon suffers frequent, short power outages and clients complain about losing session time | If you have a T-Max® Manager, changing parameter 23 from “0” to “1” will allow the tanning bed to remember how much time was left when power goes out and resume its session after power is restored. Consult your T-Max® Manager manual for information on setting parameters. |

Ballast

Capacitor

Lamp Holder w/o Starter

Lamp Holder w/ Starter

Timer Assembly

Remote Connection PCB

Contactor

Fan Relay

Fan, Cooling

Starter

This half typical of other panels.

Module, Control Assembly shown.
## Parts List

This is a list of parts which may be replaced by the consumer. Care should be taken when replacing anything related to electrical wiring. We recommend contacting a professional electrician. When calling for parts, first state your booth model as K-48 SUNDOME. Then refer to this list and preceding illustrations for proper part identification.
