

STOP DROP BARRICADING

INTRODUCTION

The Stop Drop Barricading System is a lightweight, clip-on safety barrier designed to prevent tools and objects from falling off elevated areas. Made from impact-resistant, UV-stabilized polymer, it installs easily on handrails—no bolts or hot work needed. Perfect for platforms, scaffolds, and walkways, it ensures maximum safety without blocking light or visibility.

APPLICATION

- Platforms & Walkways: Prevent tools and materials from falling.
- Scaffolding & Stairways: Protect workers below from dropped object hazards.
- Industrial & Offshore Sites: Maintain safety in high-risk elevated areas.
- Temporary or Permanent Barriers: Easy to install, remove, and reuse as needed.

FEATURES

- Snap-lock clip-on design – no bolts or hot work required.
- Lightweight, UV and impact-resistant polymer construction.
- Wind tunnel tested up to 300 km/h for stability.
- Non-obscuring and glare-resistant for clear visibility.
- Reusable, recyclable, and weather-resistant for long service life.
