Our mission is to bring you products you can rely on to handle everyday abuse. Grab and go without thought. Products that look better with some dings and scratches. Like a well broken-in hat or pair of jeans. Products that are properly engineered to be super tough, fun to use and nice to look at. The best part, these products are only available factory direct. Why does that matter? Without distributors or dealers, this **means we can offer these awesome products at wholesale level pricing for everyone.** Its that simple.

We make watches designed to get beat up on a daily basis and look good doing it. The kind you wear to work outdoors. Watches you can wear daily and not worry if you drop it or bang it against a wall. Watches that even a diesel mechanic or an oil rig worker could wear daily and just not have to worry about it.

Our product line begins with watches and watch accessories but our goal is to also expand into many other durable EDC products in the future. No matter what we offer, our mission is for every product we produce to be extremely durable, highly engineered, great looking and affordable.

CARE AND MAINTENANCE

A maintenance service interval of 5 years is recommended to maintain optimal water resistance.

Never open the watch yourself. If any repairs are needed, contact us at **EDC HARDWEAR** directly for instructions to send for repair.

EDC HARDWEAR can only assume responsibility for serviced performed at our authorized service center.

All **EDC HARDWEAR** watches have shock-resistant movements that have been individually tested to meet international standards.

Dust

Dust can enter a watch if the case, crystal or crown is not intact. A small particle is enough to stop the movement. Have your watch repaired promptly if the crystal becomes loose, chipped or cracked, or if there is damage to the case or crown.

Magnetism

The exposure of a timepiece to strong magnetic fields will affect its time-keeping and may cause it to stop. A quartz watch should resume working with its original accuracy when removed from the magnetic field. A mechanical timepiece may require demagnetization before it will operate properly again.

Water Resistance

All **EDC HARDWEAR** watches are tested to meet international standards for water resistance.

To maintain water resistance, periodic maintenance is required.

The gaskets and crown which seal the watch are subject to wear and deterioration under normal use. These parts should be inspected, lubricated or replaced as needed each time the watch is opened for service.

CAUTION: EDC HARDWEAR will not be responsible for any damage caused by or related to leakage origination from improper handling or damage to the case, crown, gaskets or crystal.

IMPORTANT: The crown must be fully screwed down during normal use, while storage, and while exposing the watch to water.

CALIBER: Miyota 2170 Solar

MIYOTA 2170 SOLAR INSTRUCTIONS

Crown Position I : Default position. Running. No crown function.

Crown Position II: Setting the time. Rotate hands clockwise to set the time. This position will also stop (hack) the seconds hand.

Full charging of the solar cell takes 2 hours to generate 4 months of running time in storage.

Normal daily wear will recharge the battery cell for continuous running.

No battery change is needed.

10 seconds of sunlight will start the movement running. Initial startup will be in power saving mode with 2 second interval timing until the battery has enough power for normal functioning.
