

Tantalum Fast Facts	
What is Tantalum/Ta73?	Tantalum is a dense earth metal with great malleability and a beautiful lustre. With a comparable weight to 18ct gold, tantalum feels luxurious and is known for its durability.
Maintenance	Tantalum is a strong and durable metal and is preferred for its low maintenance characteristics. Like most metals, Tantalum will show natural wear over time, adding to the appeal of this beautiful dark metal. It can be refinished and does not require any plating.
Resizing and Customisation	<p>Tantalum is covered under our Forever-Fit Guarantee for a free size replacement.*</p> <p>Tantalum is a malleable metal lending itself to versatility including stretching and compressing for resizing and customisation.</p> <p>We recommend checking with the team at Infinity Rings to ensure that the size change can be achieved without impacting on the integrity of the design.</p> <p>*please refer to the terms and conditions for exclusions.</p>
Why choose Tantalum?	<p>Tantalum is naturally hypoallergenic, strong and shatterproof and will not corrode.</p> <p>Low maintenance, heat resistant and hard wearing.</p>
Colour	As one of the worlds darkest naturally occurring metals, tantalum has a dark grey colour with a blueish tint.
Engraving	Tantalum can be engraved, and as with all Infinity Rings Collections, this engraving is included complimentary as part of our exceptional customer service offering.
Other uses of Tantalum	<p>Mobile phones</p> <p>Medical equipment</p> <p>Equipment on the space shuttle</p> <p>It is also used in some prestigious watches</p>
