

OASIS Impacts Everything

Your OASIS accuracy impacts every part of your organization. It impacts your quality scores, your reimbursement, your success with Value-Based Purchasing, your STAR rating, and, most importantly, the care your patients receive. In essence, it impacts the very viability of your agency. That's why choosing the right education for your staff is key to success.

BerryDunn has spent years developing the most effective, most engaging online content in the industry. Based on the cognitive constructivist learning theory, the program guides users through OASIS instruction using scenario-based modules that are highly targeted based on pre-testing metrics. The result is increased accuracy and retention in a reduced period of time.

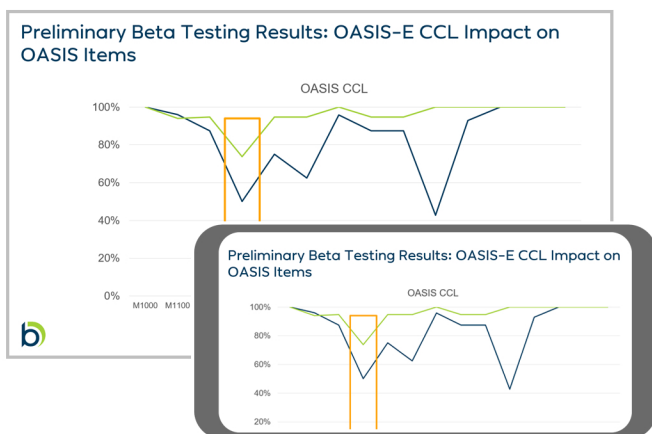

OASIS-E CCL: Move to Improve Training Package

BerryDunn's comprehensive online OASIS-E CCL training package provides you with the tools and resources you need to measure OASIS proficiency in your organization and make improvements based on your agency's needs.

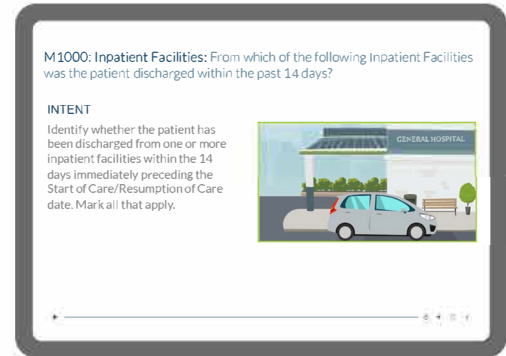

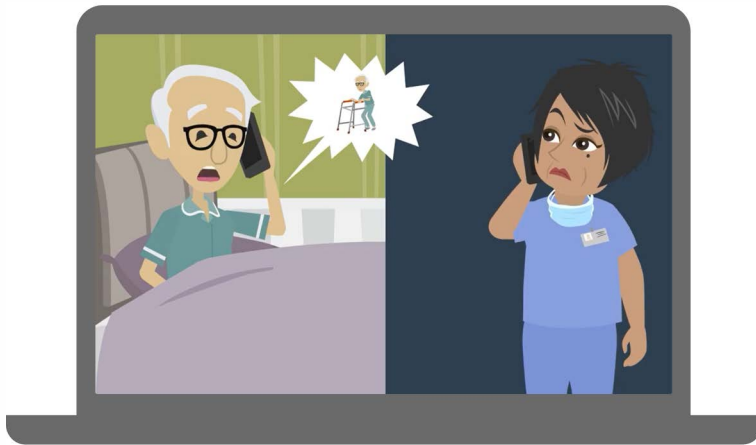

Step 1: OASIS-E Pre-Test

Developed by a panel of OASIS specialists with over 50 cumulative years experience working with OASIS, our OASIS-E CCL comprehensive pre-test helps provide agencies with insights into their current accuracy levels. Based on the scores of the pre-test, agency managers are delivered custom reports identifying score by clinician as well as specific problem areas to use as a baseline.

Step 2: OASIS-E CCL Move to Improve Education Modules

The education component of the program is delivered in 12 modules delivered over a 6-month time period totaling an average 50-60 minutes of education per month. Each module focuses on a specific problem area identified in the pre-test and delivers interactive scenarios that walk clinicians through the patient experience. For full competency, frequently missed items are repeated month to month until a collective understanding of that item is made.

Step 3: OASIS-E Post-Test

At completion of the program clinicians complete a final post-test to measure improvements. Clinicians who successfully complete the post-test with a score of 80% or greater are awarded OASIS Field Certification (OFC).

We've Got Proof

How do we know our products work? Because we've tested them. In a recent beta trial we put 50 clinicians through the OASIS-E CCL training package.

The Results

- 17-25%: Average increase in OASIS testing/accuracy scores
- 17%: Average increase in OASIS items that impact HHVBP
- 19%: Average increase in OASIS items that impact STAR ratings
- 6: Months it took to make improvements

**OASIS-E CCL is approved for ANCC nursing contact hours and can be completed in your LMS or ours.*
