

How to measure a garden/ side gate:

Working out the required size is an important yet simple task to complete but we are always at hand to assist you through the process

Calculating Gate width between existing Pillars or Posts:

Take three measurements, top, middle and bottom (as below).

Take the shortest of the three measurements and reduce by 100mm (or 4"). This allows for the hinge (inc pins) and opening gap. The final figure will be the actual width of gate required.

For example: Top: 1m 155mm | Middle: 1m 150mm | Bottom: 1m 145mm - shortest measurement would be 1m 145mm - reduce by 100mm = **Actual Gate Width of: 1m 045mm**

Enter your widths below:

Top:Middle:.....Bottom:.....

Reduce lowest measurement by 20mm (3/4") = **Gate width of:**.....
