

Take three measurements between the posts/ pillars:

Enter measurements here:

Smallest measurement =

now reduce by 150mm (or 6")

Actual width of gate =

If you are adding new posts, take the whole opening measurement, deduct the post width off, then reduce by a further 150mm (or 6")

Height: Always calculated to the highest point of the gate. We recommend allowing 50mm (2") bottom clearance on a level drive. If you require a more exact height to match your post/ pillar, please call.
