

Instructions for unpacking and caring for the chandelier

Read before you start !

- Before you start unpacking, you need to prepare a flat surface without unnecessary objects and possibly put something soft so as not to accidentally drop the chandelier and not damage it.
- Define the top part on the box; you will find signs on it and we always attach postal documents to the top. Carefully open the box and remove the wooden partition, then gradually pull out the packaging material and find additional elements there (ceiling fixture, lamp and installation instructions)
- After you remove the chandelier from the box using scissors, gradually remove the adhesive tape and unwind the packaging material. If the chandelier is large, ask for help so that it is convenient to do. The open area of the chandelier will be marked on the package, do not hold on to it and do not put pressure on the chandelier; do not put the chandelier open on the table; choose another stronger and more stable chandelier part.
- When the chandelier is unpacked, make sure that all the components are assembled and you have left nothing in the box (Chandelier, Ceiling Mount, Installation Instructions)
- Prepare the packaging materials for storage until the chandelier is installed and everything is in order. After that, dispose of in accordance with the regulations of your country or find a reuse of our packaging, thanks for understanding, we care about the ecology of our planet.
- Be sure to read the instructions before installation and check all the components, follow the instructions and you will succeed perfectly. If you do not have enough installation experience, hire a specialist or person who has enough experience. Do not forget to remind him of the instructions !!
- After the ceiling fixture is installed, you need to install the chandelier, do not hold on to open areas or select one glass on the chandelier so as not to damage the glass. For installation, use the rings that come with the cartridge. Do not tighten it, it may cause breakage !!
- Once the chandelier is installed, determine the best perspective of the geometry and install a suitable lamp, we recommend using lamps in the form of tubes with a spiral. They best create a geometric pattern on the ceiling. We also recommend using a dimmer - this will give a greater effect when used and you will be more comfortable.

Chandelier Care

- Over time, the chandelier will be covered with dust and you will need to wash it. To do this, we recommend choosing a convenient place in the bath and preparing a plane with a soft cloth there so that the figure stands steadily. Use hot water and a regular dishwashing detergent, all components must not contain abrasives and the sponge must be special for glass, as you can leave small scratches on the glass or damage the color of the chandelier.
- Wipe dry with a soft cloth after washing. Perform all actions without pressure, and not when not holding onto an open area or using one glass, use two hands when washing and transporting the chandelier.
