OmegaFlex®

As the market leader, OmegaFlex® are at the forefront of product development; bringing you the best products on the market backed up by unparalleled support.

TracPipecc By OHEGHEERS GAS

With safety our highest priority, we have worked hard to develop products that not only offer you superior gas piping, but also offers huge benefits, enabling you to work more efficiently, with unrivalled support and training.

Market Leaders

TracPipe® is the market leading product in the UK and has been since its introduction in 2000. With the introduction of TracPipeCC® in 2018, OmegaFlex® once again demonstrated how its innovative products will help shape the industry for years to come.

Support & Training

Technical expertise and product support has always been a fundamental philosophy of OmegaFlex®. Our team of experts have extensive experience in the gas industry and are able to offer free of charge support both via the technical helpline and with onsite visits.

Quality

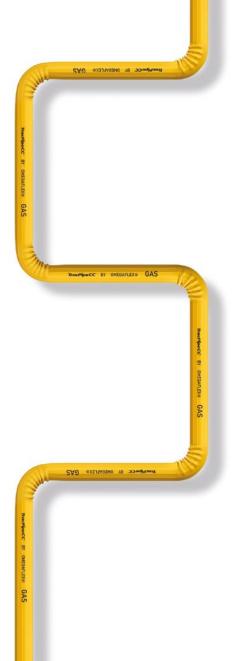

Safety is paramount so the products we manufacture will always be of the highest quality. TracPipe® and TracPipeCC® are made from the best quality materials and are continually robustly tested in accordance with our ISO 9001: 2015 Quality Procedures.

Money Saving

TracPipe® and TracPipeCC® are up to 3 times faster to install than rigid pipe materials meaning you can save time on installation costs. Both products also typically have superior gas flow rates than comparable products in the market place, offering the potential to make increased savings by reducing the diameter. As part of our support we offer a pipework sizing service, also free of charge.

Committed to world class manufacturing and support

Established in 1975, OmegaFlex® is a product and engineering-driven company committed to meeting the most stringent performance requirements for all of its customers.

In 2000, OmegaFlex® Limited was established in the UK, when TracPipe® tubing was brought to the UK market. Since 2007, TracPipe® (and now TracPipeCC®) have been manufactured in the UK from where it is shipped across UK, Europe and worldwide.

With World Class manufacturing comes World Class support! Customer service, technical expertise and product support is always available from our team of experts. As a UK based business, we are able to offer support via the customer service and technical helplines as well as with onsite visits. We also offer free of charge training to users and specifiers.

Choose TracPipe® and TracPipeCC® to replace copper and steel:

- For ease and speed of installation
- Run long, continuous lengths direct from meter to appliance - No joints
- TracPipe® range of AutoFlare® fittings integrate directly to rigid pipe materials
- Durable and light weight
- Semi-rigid and flexible
- Bends and conforms by hand
- Cuts with a standard stainless steel tube cutter
- $oldsymbol{\Omega}$ No threading or hot works needed
- TracPipe® and TracPipeCC® can be used for direct burial without the need for additional mechanical or corrosion protection.

4 times lighter than rigid steel pipe

Market leaders in the UK since 2000

4 times more resistant to on-site damage

Smart installers don't cut corners

TracPipe® is a BSI Kitemarked stainless steel semi-rigid gas piping system and has been manufactured in Banbury, Oxfordshire, since 2007.

TracPipe® can be directly buried in the ground or screed and used externally above ground without the need for additional mechanical and corrosion protection. TracPipe® also has a 2 hour fire rating when installed in continuous lengths (no joints) and can be routed within fire protected shafts, corridors and lobbies.

TracPipe® is typically three times faster to install compared with traditional rigid steel or copper pipe installation – ideal for installers looking for a competitive advantage by reducing labour time in a challenging marketplace. It has become recognised as the perfect alternative to rigid pipework installed between the meter and a fixed appliance. It is easy to cut and bend by hand, and requires no soldering, welding or special tools.

TracPipe® is supplied in sizes from DN12 to DN50 with lengths of up to 90m as standard with longer lengths available as special orders. TracPipe® KITS are available in sizes DN15, DN22, DN28 and DN32 in 5, 10 and 15 metre lengths.

TracPipe® has been used in over 10,000 locations across the UK

Fit up to 3 times faster than with copper pipe

We've got something new up our sleeve

TracPipeCC® is the original TracPipe® but it has a second polyethylene outer cover over the length of the product.

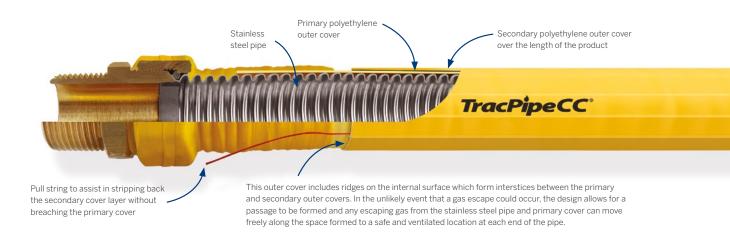

TracPipeCC®, which has been independently assessed by BSRIA, a leading independent UK laboratory for testing and performance verification of building services products, is designed to overcome the need to install an additional secondary containment sleeve as the product is produced with the secondary containment already in place.

TracPipeCC® is available in sizes DN15 to DN50 and is supplied on reels of varying standard lengths with longer lengths available as special orders.

Advantages of using TracPipeCC®

• TracPipeCC® negates the need to install a secondary containment sleeve through unventilated voids. • TracPipeCC® can be used on horizontal and importantly also on vertical runs as the ridges on the internal surface offer support to the internal pipe whilst also maintaining the channels for free movement of gas should there be an escape. TracPipecc

- TracPipeCC® is suitable for use in fire protected areas such as protected shafts, escape corridors and lobbies when installed in continuous lengths (without joints).
- TracPipeCC® still bends by hand with no specialist tools or hot work required.
- TracPipeCC® is still faster to install than rigid material such as copper and steel.
- TracPipeCC® can be supported with standard clips/ brackets as well as on cable trays or baskets.
- TracPipeCC® can also be used in all of the usual applications for TracPipe® including for direct burial in the ground and screed.

"After using TracPipeCC®, I never want to use copper again." OmegaFlex® Ltd has trained in excess of 25,000 users of TracPipe® and TracPipeCC®
