

# 3 STAR INDUSTRIES

## HISUN SECTOR 450

### Two-piece Polycarbonate Windshield Kit Installation

HARDWARE	DESCRIPTION	QUANTITY
	2" LOOP CLAMP	8
	WINGNUT	8
	1 1/2" BOLT	8
	NEOPRENE WASHER	8
	SMALL WASHER	8
	LOCK NUT	8
	6" ADHESIVE VELCRO STRIP	8

**Do not remove protective paper!**

STEP 1: Set windshield bottom section hood line.

STEP 2: Wrap adhesive Velcro around the roll bar in the vicinity of the clamp holes precut in your windshield. Install loop clamp over the Velcro strip.

STEP 3: Assemble bolt, neoprene washer and wingnut.

STEP 4: Peel back protective paper enough to expose the clamp holes. Insert wingnut/bolt/washer assembly in through the front of the windshield, through the hole in the clamp, secure on the inside of the windshield with small washer and lock nut.

STEP 5: Repeat steps for opposite side. **Hand tighten only at this time.**

STEP 6: Set the top portion of windshield on the bottom portion.

STEP 7: Wrap adhesive velcro around the roll bar in the vicinity of the clamp holes pre-cut in the windshield. Install loop clamp over the Velcro.

STEP 8: Peel back protective paper enough to expose the clamp holes. Insert wingnut/bolt/washer assembly in through the front of the windshield, through the hole in the clamp, secure on the inside of the windshield with small washer and lock nut.

STEP 9: Repeat steps for all remaining loop clamps.

STEP 10: Tighten hardware.

**Remove protective paper from both sides of the windshield!**

**Do not wipe your polycarbonate windshield anything, including T-Shirt, bath towel or even micro fiber cloth!**

**All of these materials will scratch the windsheild.**

**We recommend you spray the windshield with a water hose to loosen up dirt and mud. Spray with water hose until all dirt and mud and whatever is gone from the windshield.**

**Once the windshield is free of bits and pieces of dirt then you may use micro fleece only to buff the out streaks left over from the water, or use MUDD Traxxs Ceramic Detailer to shine up the windshield.**

**Micro fleece can be found at walmart, it is super soft material mostly used to make blankets. I am not talking about regular fleece! Micro Fleece only please. Even with a micro fleece blanket you may still leave tiny scratches so wipe windshield gently please. Not sure about the fabric please call 859-488-7447 ask for Sam.**

**Do not use windex! Or any other chemical to clean the windshield. You may use wax but before you do, test a small portion of the windshield just in case.**

**I will repeat the only thing I ever use to clean the windshields are MUDD Traxx Ceramic Detailer and dawn dish soap! Squirt dish soap on windsheild then spray off with water hose. One more time for those in the back do not wipe the windsheild!**
