

NAK Engine Valve Cover Gaskets and Kits

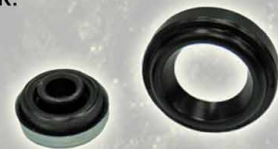

ISO-9001/14001
ISO/TS-16949
OHSAS-18001

World Class Brand World Class Manufacturing

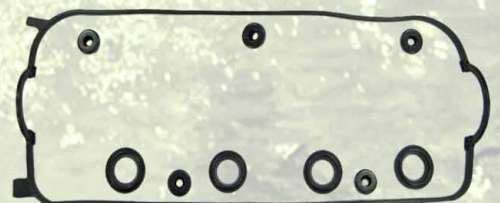

Valve cover is attached to the edge of the engine block covering the top of the valves or pistons. They insure that valves retain proper pressure, heat, and oil circulation while the lifters or rockers move up and down with the firing order of the engine. Valve cover gaskets are important because they create the seal that keeps oil or air pressure from escaping through the valve cover while the car is running. Valve Cover Gaskets wear out after a few years and allow oil to leak from the side of the engine. If the leakage is bad enough, the Engine Oil will lead to screeching sound caused by the belt slipping, costly engine steam cleaning, corrosion or corruption of other components attached to the engine block.

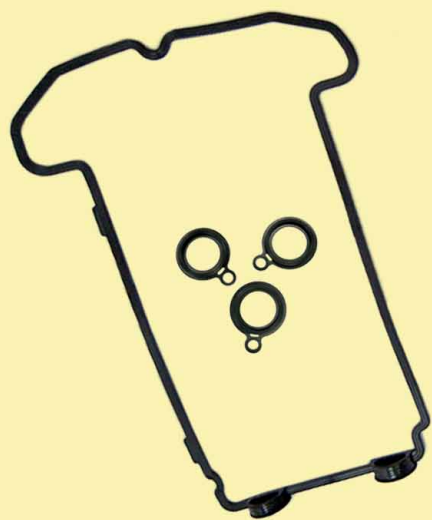

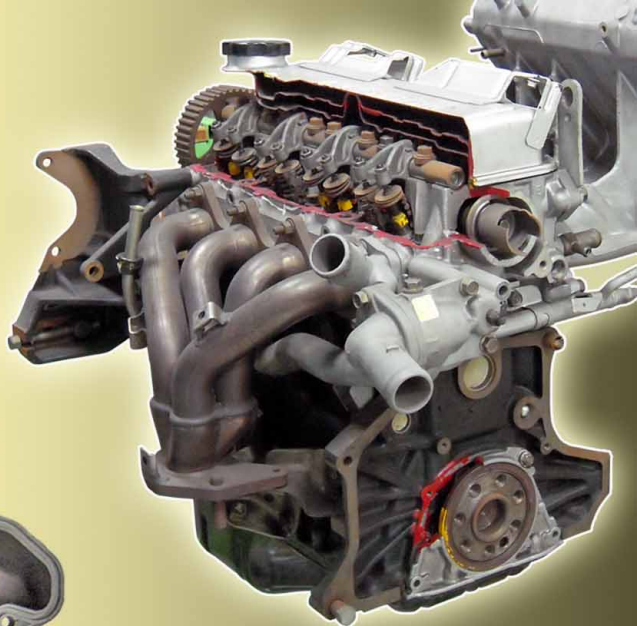

To ensure superior performance across a wide variety of engine types and sizes, NAK manufactures a complete range of Engine Valve Cover Gaskets from in house compounded materials with state-of-the-art process to provide with the highest quality available in the aftermarket. All the gaskets contain the same quality, design, and materials supplied to OEMs globally to meet the needs of each individual customer.

NAK design engineers have the ability to analyze the environment the gasket will perform in, select the proper material, and apply the appropriate technology to offer the highest performing gaskets available in the market.

NAK also offers Engine Valve Cover Gasket Kits which consists of the engine valve cover gasket, valve cover bolt grommet, spark plug seal, semi-circular plug and etc. to provide one-stop-shopping convenience for distributors, retailers and rebuilders.

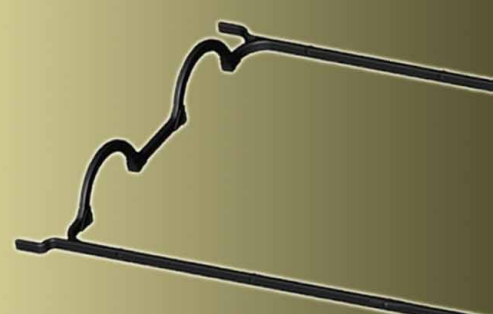

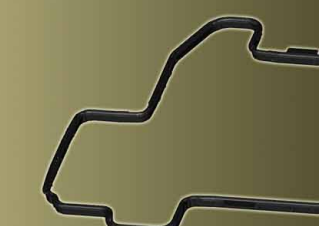

There are different kinds of valve cover gaskets. A V4, V6, V8, V12 engine may have multiple Valve Cover Gaskets as each cylinder head will have a Valve Cover. Premium gaskets are usually made of proper gasket material and have been tested at higher rates of temperature and pressure. This keeps the car running smoothly, reduces any loss of horsepower, keeps the exterior of the engine and its components free of oil corrosion, and keeps the valves properly lubricated so they don't get warped or destroyed by friction while firing.

NAK produces a large range of sealing parts for Automotive Application. For more than 38 years, NAK has been one of the largest manufacturer and supplier in the aftermarket for commercial vehicles and trucks with around 30,000 different spare parts.

NAK engine valve cover gasket and the kit sets are in a high temperature resistant rubber ACM which is developed and compounded in house. And those are produced under a secured quality care and control in NAK executive production facilities especially for gasket only. We welcome you to order a new open tool product in case there is not in our product list. Please contact us directly or at our website: www.nak.com.tw

Disclaimer

1. NAK products are not intended to be used, installed or applied in or on any aerospace related instruments and/or equipment. Any such use, installation, or application is prohibited and shall void all warranties.
2. NAK disclaims any and all express or implied warranties if the products :
 - 2.1 are modified or tampered with;
 - 2.2 are misused, abused or misapplied;
 - 2.3 are used in a critical environment or specific equipment without NAK's prior written consent;
 - 2.4 are not used in accordance with the printed user instruction materials; or
 - 2.5 are damaged due to natural deterioration, decomposition or transformation of chemical structure.
3. The products may be applied in critical environment or specific equipment only upon official confirmation of the sample by NAK's technical personnel and the passing of tests conducted by buyer.
