

DOWNSPOUT NOZZLE

BIRD SCREEN ACCESSORY (OPTIONAL)

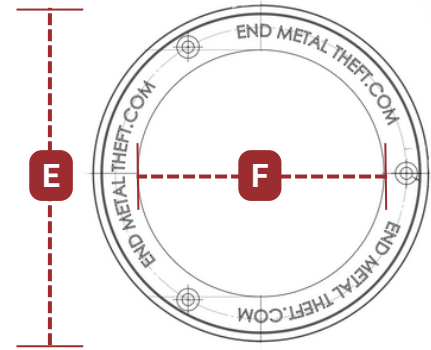

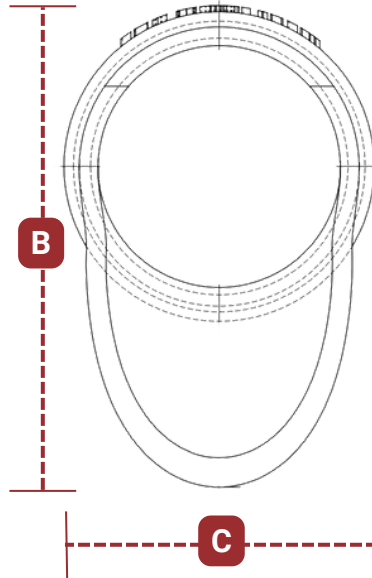

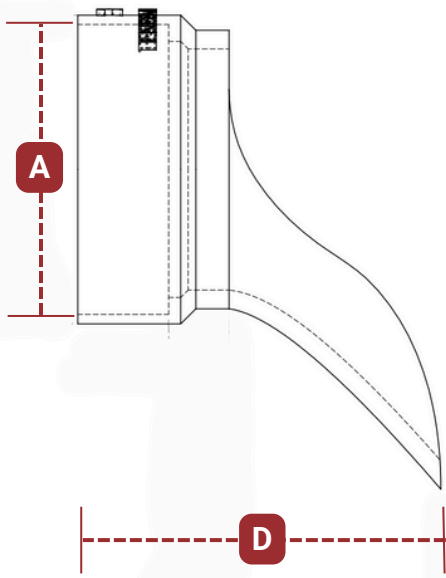

How it works:

Plastic Downspout Nozzles are used as a parapet overflow or at the base of a wall to divert water away from the building to protect the foundation from excess moisture and help eliminate wall stains. The escutcheon covers the rough opening around the nozzle. Plastic Downspout Nozzles are a very low cost effective alternative for new construction or the replacement of brass nozzles broken off buildings for their scrap metal value.
