

Cedar Plank Hangers

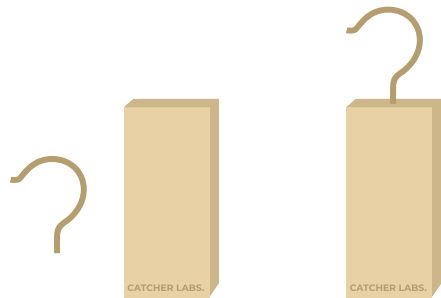

CATCHER **LABS.**

CATCHER LABS.

Description

Made with Cedarwood harvested from the USA, Catcher Labs Cedar Plank Hangers are an essential item within the moth prevention ecosystem of your home. All natural and non - toxic as one expects from any Catcher Labs product.

They can be used with the hanger attached on a clothes railing or by themselves in drawers too. Cedar planks provide repellency against clothes moths thanks to natural aromatic compounds, such as thujaplicin and other oils. These compounds have a pleasant scent that humans find appealing, while insects such as moths find repulsive. Therefore, they both repel moths and also act as an air freshener for your clothes and fabrics.

Manually screw metal hooks into designated opening at the top of planks

Hang 3 to 4 planks in your closet each at a distance of at least 6 inches apart

When to use

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

GAMMA MATRIX

How To Use: A single cedar plank by itself may not be as effective. Therefore, we have developed the ultimate method called a “GAMMA Matrix” to get the most efficient outcome from our cedar planks. 3 to 4 cedar planks are placed in a row formation at a distance of 6 inches apart between each plank. GAMMA Matrix method will accelerate the process and efficiency of repelling moths in your wardrobe.

Non-Toxic – Cedar Plank Hangers do not contain any toxic chemicals. They are safe to use for the whole family including pets.

Bio-degradable – Our traps are environmentally friendly and made out of bio-degradable materials.

Protects your clothes and textiles with a pleasant odor. Acts as an air freshener for your closet at the same time.

NOTICE

If used not in accordance with directions stated on product description, buyer assumes all responsibility for safety and use to the extent consistent with applicable law.

FAQ

1. How do I know if I have a pantry or clothing moth infestation?

It is quite simple to identify between pantry or clothing moths.

Clothing moths usually infest your clothes and fabrics that mostly have animal fibers. Naturally, clothing moths are found in dark areas of your wardrobes or closet. They are known to be good crawlers and jumpers rather than flying. They feed on wool, silk, feathers, leather and fur.

Pantry moths are mostly found in the kitchen or in rooms close to your kitchen that may also have dry goods storage. Pantry moths come into the house through dry foods that are already infested with adult moths or their larvae. Larvae feed on dry foods including grains, dried fruits, cereals, nuts, processed food and groceries.

3. How long do Cedar Plank hangers last?

Cedar Planks can last up to 6 months but we recommend replacing them every 3 months to keep freshness in your closet.

2. Do Catcher Labs Cedar Planks Kill Moths?

Cedar wood planks do not kill moths, rather repel them from your closet and beloved clothes. Cedar wood smells pleasant for humans but acts as a natural repellent for moths.

4. Do Catcher Labs. have guarantee on products and return policy?

Yes. Catcher Labs. is customer oriented. If you are unsatisfied with our products, or happen to get a broken/deformed product, you can contact us for a replacement or full refund.
